1. Welcome to Georgia DMR group.

Yahoo group: Georgia_DMR
Date: 2012-04-14 03:39:36 UTC
From: Georgia_DMR-owner@yahoogroups.com
Topic: 1 Message: 1

the Georgia DMR group supports DMR Radio network in Georgia.
DMR is Digital Mobile Radio. At first this will be Motorola TRBO. This is a two time slot TDMA format.

Amateur radio operators in Georgia that want to discus TDMA are welcome.
We are not meant to replace the main trbo groups just a place for local chatter about the project progress.
A lot of good info can be found on the DMR-MARC website.
http://www.dmr-marc.net/
And the yahoo group mototrbo.

To reduce spam this is a membership based group and new users are moderated to make sure no spammers creep in.

Thank you for your interest.

2. First Mototrbo repeater in Georgia.

Yahoo group: Georgia_DMR
Date: 2012-04-14 03:49:16 UTC
From: Kevin K
Topic: 2 Message: 2

The first Mototrbo repeater in Georgia is under construction. The quote for the new xpr8400 has been submitted for approval.
The repeater will be tested low level in the Oakgrove area of Acworth.

The plan is to build a local network of connected repeaters. The local system will also connected to the DMR-MARC network pending approvals.

The system will run mixed mode. This means you can use the repeater with regular analog or trbo radios. DMR traffic will not cross over to analog or analog to Digital. It just means the repeater can support both uses automatically.

9. Live DMR-MARC Audio feed

Yahoo group: Georgia_DMR

DMR (Digital Mobile Radio)

DMR is a published international digital radio standard that specifies the 2-slot (channel) TDMA communications. DMR is amateur radio's newest digital protocol. DMR radios are produced by several manufacturers and they all work on our TRBO system. DMR is not compatible with Icom's D-Star technology. Competition between manufacturers is a big reason why DMR radio prices are fair. DMR is here to stay since it is not a single manufacturer technology.
DMR also satisifies the FCC's narrowbanding mandate by being 6.25 kHz equivalent. It's actually more spectrum efficient than other 6.25 kHz modes since no guard band is needed for the two channels. Think of DMR as HALF the channel bandwidth of a 25 kHz analog signal with TWICE the number of voice channels. It's also features forward error correction, offers extended battery life, and did we mention it has superior voice quality over other digital voice modes?

12. DMR for 900 mhz

Yahoo group: Georgia_DMR
Date: 2012-04-22 23:29:12 UTC
From: Kevin K
Topic: 12 Message: 12

Good news for the 900 Mhz fans. We have gained info on programming the Mototrbo gear to ham 900 freqs.

I am going to test the steps later next week. If this pans out the 900 trbo project is back on.

I hope to have some pricing on the 900 gear soon.

-Kevin

From: Kevin King
Topic: 16 Message: 16

Here are some links to more DMR options.

From what I read basic DMR operation from all the DMR radios work together. They will all talk on a TRBO repeater. The only issues I uncover are incompatibilities with options Motorola added options not in base DMR standards.

Hytera has a DMR offering.

Topic: 18 Message: 20

At some point Sandy Springs will get Turbo. At first it will run here so I can fully learn without running to the site every other day. Then I imaging I will take it portable for some demo's and presentations. I do have another freq and site I can do some high level testing from. Just have to see Bill. I also want to try some of the Hytera DMR repeaters and work with using some VOIP PBX software.

With the Ip site connect and DMR high site will be a thing of the past. We can connect many low level sites and reuse pairs to create a network that the users will be served by the strongest site where they are. It will almost work like hand offs in cellular. But we are just at the beginning and have to get folks interested. With yaesu hinting about a possible DMR offering, I can see the righting on the wall. DMR is very planted outside the US. We just have to see how compliant the ham versions are going to be. There are a few very large DMR networks out there. This first box will connect with the DMR_MARC network. Should be a lot of fun.

-Kevin

From: Kevin King
Topic: 21 Message: 21

I just got information from a Hytera dealer that if you purchase 25 or more radios they throw in a free repeater.

Maybe it would be good to make a group purchase of hytera gear?

I will check with other vendors to see if they have similar offerings.

Thom,

This is an e-bay posting from the dealer that told me about the offer. This handheld comes with programming cable and software. And it is listed with make offer. I did invite him to join us.

I did just get the Moto repeater and two moto hand helds, so it will be a bit before I can buy more. But I sure am going to go for some of the hytera gea.

Hi Edwin,

Nice to here from you and welcome to the group.

You are the young mad I talked to on Simplex some time back that was going to build a repeater at your folks place?

On the Site connect or generically ipsec, The only one that needs to have a fixed IP is the master repeater. the others can use DHCP.

You are in a good location to hit whatever I have at the house, so when the new digital gets here you can help me figure out and test the beast before it goes to a site.

Have you decided on getting a DMR radio?

Kevin,

Thanks, Yes I am the young man that you talked to on simplex a couple of months ago. The repeater is up and running. It Has Awesome coverage. Have you Tried it???

Be glad to help in any way I can. Before I start building one I would like to see how is runs and operates before I commit to anything.. I would like to get Mototrbo But I have not due to no repeaters here in my area... But I see that is fix en to change. LOL

Kevin try my repeater out see what kind of coverage has and I might start looking for a combiner for my 440 machine.

442.950 + Pl 77

Talk to you soon.

Edwin,

Nice to talk to you today. I looked up your location and you are very close to our old repeater site just in Bartow county. The 147.240 machine was at the water tank just off old Alabama rd. in Emerson. When the state extended red-top mountain rd out to old Alabama rd the knocked down the tower when they dropped trees for the road work. Then the state destroyed the repeater building when they took over the city land where that tank was. All we could do was watch... And now the Emerson machine is running low level in downtown Emerson. You should hear that just fine where you are.

Ok so I have the repeater programmed and working in Mixed mode. It is just running on the mobile antenna for tx here at the house. I will have it on the duplexer and an outside antenna tomorrow. Oh yea it is on the Adarsville Freq. 444.125 pl 127.3 Digital is color code 3 with talkgroup 2 local. on TS2.
The digital TDMA sounds great! I am very happy with how it is working so far.

Mostly for now. This is the test system for now. the plan is to eventually put it in place of the 441.950 that is in Atlanta.
I am still learning. But do have most of it figured out. The repeater is the easy part. Getting the user radio set is a bit more involved.

From: Kevin King
Topic: 44 Message: 44

The trbo repeater (444.125) is now connected to the DCI test network. This is a system for testing and new system to learn the ropes. It is part of the trbo6 network system. I felt this was the best place to get our feet wet with trbo networking. I made my first contact with Mike, WB6WUI who is just getting ready to leave Dayton.

I am very happy with the performance of the system. One note when the repeater is configured to IPSEC (networking) the Dynamic mixed mode is disabled. So in this configuration the repeater will only run in digital mode. So yest that means you can not pop the repeater in analog FM mode.

So right now I know of only three radios in Georgia that have been registered with Georgia radio ID's.

So Greg, (he has the only other Georgia radio ID) I would like to hear from you. I can send you my code plug so you can get your radio set-up. I am not sure you can work the machine from here at the house. Please check the Sandy Springs repeater 441.950 156.7in 103.5 out pl. This site will be one of the systems that will go DMR in the near future. So if this system covers your travels I will make haste to get it running DMR.

I have not done that yet. But hope to I have more been playing with the system. That and I just have the two hand helds. I will walk the subdivision to see how it compares to the old analog test system. If you look at my location in QRZ you will see my location along I75. I do not expect much coverage from here. Now to see about second system.

I would like to get a Hytera and play with it. I do want to work on a hytera/Moto bridge.
I do need a DMR lab here at the house. I need to win the lotto to fund it all. I have 900 meg plans and that can only be done with Moto. My repeater on 441.950 that covers top end of Atlanta is a mtr2000. I could upgrade it to the mtr3000 or replace it with another xpr8400.

47. First DMR NET in Georgia

Yahoo group: Georgia_DMR
Date: 2012-05-26 17:51:19 UTC
From: Kevin King
Topic: 47 Message: 47

Today we had Time slot 2 of the repeater connected to the DMR North America and DMR worldwide talk groups for the Worldwide DRM net.

DMR stations from Europe, South America, Hawaii and north America all checked in.
I believe it was 50 or better. And I checked in as the first check-in from the fine state of Georgia.

Wb6wui Mike had a turbo system setup at Dayton. He is traveling back to the state of Washington. He has the repeater setup in the car connected to a LTE network stick. So this is a moving connection on the DCI network. I have made several contacts with him durring his trip. I have been following him on APRS (WB6WUI-3) .

48. Copy DMR and other digital traffic with your PC

Yahoo group: Georgia_DMR

From: Kevin King
Topic: 48 Message: 48

If you want to hear what is going on on DMR and do not have a DMR radio. There is a software to decode the raw data from a discriminator output of a scanner or other FM radio. It would be a hookup like high speed packet.

Do a Google search for
Digital Speech Decoder

Much of the code runs on UNIX systems. But I did see one article for a windows based product. This will decode the data and play a voice from your soundcard. It will do C4FM, P25 and some other modes. Might be something you scanner guys might like to play with.

Kevin .

This looks interesting, and I do have a radio with a raw discriminator output already. Never really thought about doing this before. Stupid question... Will v1.4 also somehow control my radio so it will track the conversation on a trunking system? Perhaps the radio itself already does that? Or is this to be used on a computer and a simplex frequency?

Tim, I am not sure. I have not gone down that path with the program. From what I saw it does not look like it has any control of the radio. so the scanner would stop on whatever it is set to stop at and decode.

So when are you going to go DMR?

Today's World Wide DMR Network at 1600 UTC yielded 59 attendees from a wide variety of countries and US states. The breakdown was:

Finland - 1 (OH2GLG)
Austria - 2 (OE4KMU, OE3DNW)
Switzerland - 0
Germany - 3 (DF2ER, DG1KDF, DF1VB)
Spain - 0
South Africa - 1 (ZS6ARG)
Canada - 3 - (VE2SPB, VA2OOK, VE2YI)
US - 49

NH - 2 (N1IW, NE1B)
MA - 2 (AE1C, W1RSA)
NY - 0
NJ - 1 (K2ACY)
PA - 0
MD - 2 (W3YVV, K3UCB)
DC - 0
VA - 2 (W4YP, KD4BPZ)
NC - 1 (KH2PM)
SC - 0
GA - 1 (KC6OVD)
FL - 4 (K4MAP, KK4XO, W4RCC, WD4CLZ)
TX - 1 (W5EBQ)
CO - 7 (W7RF, KT0L, N4ATA, KB0A, KD0FQN, WB5MJM, W1VAN)
NE - 2 (WB0QQK, K0BOY)
KS - 1 (W0WJB)
MO - 1 (KQ0Q)
MI - 5 (W8FSM, KB8SWR, KB8SXK, WB8SFY, W8AGT)
IL - 5 (K9SA, K9RST, KC9IL, AA9VI, NO3R)
AZ - 6 (N7TWW, KD4IML, N0FPE, KC5CAY, W9NQP, WB9EXL)
NV - 1 (NB9E)
WA - 1 (WB6WUI)
CA - 4 (W6BNS, KF6WEY, W6BJM, K6EH)
HI - 0

New repeaters joining the net today for the first time were:

Atlanta (GA), Denver (CO), Dallas (TX), Elko (NV), Grand Rapids (MI)

Later, after the net, additional repeaters came on-line also at Morris (IL) and Phoenix West.

Mike, WB6WUI, related the Amateur DMR growth statistics, during the last several months:

10 repeaters/month
70 users/month

These have been very manageable and orderly network expansions.
Thanks to everyone helping with this project.

In a few hours, listen for our New Zealand friends who will be demonstrating the network to their National Amateur Radio Conference. Give them a contact, your name and location.

73,

Kevin,

I wanted to introduce you to Jerry Schulist, copied on this email.

He is a Motorola guy in Central Florida and has a house up here, which means he
is constantly driving up from the land of eternal heat and through the ATL area.

He is a great guy, and very saavy on Motorola equipment and especially two way
radio communications in general.

You may want to share with him the repeater information and get him access if
that suits you.

I hope to have a mobile in here in a couple of days and will be able to start
testing range from the Sandy Springs site.

Thanks,

Ken

64. Vertex DMR radios

Yahoo group: Georgia_DMR
Date: 2012-06-14 21:24:41 UTC
From: Kevin King
Topic: 64 Message: 64

This is a posts from the mototrbo yahoo group. A few of the folks are talking up the vertex radio line.

Re: Vertex VXD-720

I have one, and I like it so much that it's now my 'daily carry' radio. I choose it over my XTS-3000 & XTS-5000, since it's 1/3rd smaller, and there's a lot more happening on the local DMR repeater than the local P25 repeater. (I won't be getting rid of my XTS gear though).
Great audio, analog and digital. Easy to program. CPS is free. Programming cable not overly expensive. It's a well built, rugged HT that fits in the hand well, and with the FNB-V117LI Lithium Ion battery, which is much lighter (and lasts a lot longer between charges) than the standard FNB-V116 NiMH battery, it's comfortable to carry. I travel alot for work, and spend too much time in hotels around the US. My VXD-720 always rides along in my bag, and it's easy to update the codeplug with UHF analog & DMR repeaters in the area with my laptop from the hotel room if necessary.
Great scan features which are easy to modify from the front panel. Right now I have 9 zones. UHF analog repeaters, DMR Ham and local business (monitor only of course) stuff for different cities; GMRS/FRS, etc. I'm slowly building the Digital Contacts (names/callsigns) in the CPS since the Motorola XTS CPS codeplug cannot be used to fill in the names.

My one and only complaint: lack of analog DTMF capability. The full keypad is for typing text messages for digital mode messaging, and I can add Contacts (user ID/Name/callsign) to the radio via the keypad if necessary.

Pricing varies. I've seen them as high as the MSRP of $895 to as low as $429. Average is around $575. Check Ebay for sales that pop up. Also check
http://www.vertex-wireless.com/vxd-720-digital-radio/
to see what their current special is.

The Motorola XPR programming cable >might work< but I haven't had a chance to test one, so order a CT-155 programming cable too.

Do a search here in the Group for VXD-720 and you'll find some other discussions regarding the radio from me.

I decided to get a VXD-720 because the used, scratched up junk XPRs on Ebay were more than a brand-new VXD-720 with a 3 year warranty.
But if I ever find a nice, well taken care of XPR-6550 for the right price, it will be welcome in along with my other Motorolas.

I just bought a brand new VXD-7200 for $478 today also.

Chris

Chris,

Great review and it's on my list of radios for others to get to break into DMR. I am too entrenched in Motorola TRBO radios to switch gears but this sounds perfect for a ham wishing to get into TRBO.

I'm wondering if those ID mapping files were of any use. They contain all 1,552 DMR users as of June 1st. If not, please tell me the import format needed and I'll see if I can generate a file. As it is, it takes me an hour or 2 to create them for the TRBO contact list so I'd just as soon have the effort provide more bang for the time.

Regards,

-- Mike

This is a posts from the mototrbo yahoo group. A few of the folks are talking up the vertex radio line.

Re: Vertex VXD-720

I have one, and I like it so much that it's now my 'daily carry' radio. I choose it over my XTS-3000 & XTS-5000, since it's 1/3rd smaller, and there's a lot more happening on the local DMR repeater than the local P25 repeater. (I won't be getting rid of my XTS gear though).
Great audio, analog and digital. Easy to program. CPS is free. Programming cable not overly expensive. It's a well built, rugged HT that fits in the hand well, and with the FNB-V117LI Lithium Ion battery, which is much lighter (and lasts a lot longer between charges) than the standard FNB-V116 NiMH battery, it's comfortable to carry. I travel alot for work, and spend too much time in hotels around the US. My VXD-720 always rides along in my bag, and it's easy to update the codeplug with UHF analog & DMR repeaters in the area with my laptop from the hotel room if necessary.
Great scan features which are easy to modify from the front panel. Right now I have 9 zones. UHF analog repeaters, DMR Ham and local business (monitor only of

course) stuff for different cities; GMRS/FRS, etc. I'm slowly building the Digital Contacts (names/callsigns) in the CPS since the Motorola XTS CPS codeplug cannot be used to fill in the names.

My one and only complaint: lack of analog DTMF capability. The full keypad is for typing text messages for digital mode messaging, and I can add Contacts (user ID/Name/callsign) to the radio via the keypad if necessary.

Pricing varies. I've seen them as high as the MSRP of $895 to as low as $429. Average is around $575. Check Ebay for sales that pop up. Also check http://www.vertex-wireless.com/vxd-720-digital-radio/ to see what their current special is.

The Motorola XPR programming cable >might work< but I haven't had a chance to test one, so order a CT-155 programming cable too.

Do a search here in the Group for VXD-720 and you'll find some other discussions regarding the radio from me.

I decided to get a VXD-720 because the used, scratched up junk XPRs on Ebay were more than a brand-new VXD-720 with a 3 year warranty.
But if I ever find a nice, well taken care of XPR-6550 for the right price, it will be welcome in along with my other Motorolas.

I just bought a brand new VXD-7200 for $478 today also.

This is a posts from the mototrbo yahoo group. A few of the folks are talking up the vertex radio line.

Re: Vertex VXD-720

I have one, and I like it so much that it's now my 'daily carry' radio. I choose it over my XTS-3000 & XTS-5000, since it's 1/3rd smaller, and there's a lot more happening on the local DMR repeater than the local P25 repeater. (I won't be getting rid of my XTS gear though).
Great audio, analog and digital. Easy to program. CPS is free. Programming cable not overly expensive. It's a well built, rugged HT that fits in the hand well, and with the FNB-V117LI Lithium Ion battery, which is much lighter (and lasts a lot longer between charges) than the standard FNB-V116 NiMH battery, it's comfortable to carry. I travel alot for work, and spend too much time in hotels around the US. My VXD-720 always rides along in my bag, and it's easy to update the codeplug with UHF analog & DMR repeaters in the area with my laptop from the hotel room if necessary.
Great scan features which are easy to modify from the front panel. Right now I have 9 zones. UHF analog repeaters, DMR Ham and local business (monitor only of course) stuff for different cities; GMRS/FRS, etc. I'm slowly building the Digital Contacts (names/callsigns) in the CPS since the Motorola XTS CPS codeplug cannot be used to fill in the names.

My one and only complaint: lack of analog DTMF capability. The full keypad is for typing text messages for digital mode messaging, and I can add Contacts (user ID/Name/callsign) to the radio via the keypad if necessary.

Pricing varies. I've seen them as high as the MSRP of $895 to as low as $429. Average is around $575. Check Ebay for sales that pop up. Also check
http://www.vertex-wireless.com/vxd-720-digital-radio/
to see what their current special is.

The Motorola XPR programming cable >might work< but I haven't had a chance to test one, so order a CT-155 programming cable too.

Do a search here in the Group for VXD-720 and you'll find some other discussions regarding the radio from me.

I decided to get a VXD-720 because the used, scratched up junk XPRs on Ebay were more than a brand-new VXD-720 with a 3 year warranty.
But if I ever find a nice, well taken care of XPR-6550 for the right price, it will be welcome in along with my other Motorolas.

I just bought a brand new VXD-7200 for $478 today also.

Chris

Chris,

Great review and it's on my list of radios for others to get to break into DMR. I am too entrenched in Motorola TRBO radios to switch gears but this sounds perfect for a ham wishing to get into TRBO.

I'm wondering if those ID mapping files were of any use. They contain all 1,552 DMR users as of June 1st. If not, please tell me the import format needed and I'll see if I can generate a file. As it is, it takes me an hour or 2 to create them for the TRBO contact list so I'd just as soon have the effort provide more bang for the time.

Regards,

-- Mike

Bruno if you go to the MOL (Motorola On Line) you can get support and purchase or update your software if you already have an MOL account.

You will need the version of software for your region. The US versions will not work with your Euro version radios. I wish I had better news and could help more.

hello together.

I have now my new mototrbo xpr6550 receive vhf radio device.
This has the R01.08.32 CP 10:00:03 my software I had with the programming cable got the version 4.5 has therefore not possible to program because
the software is too old and is no error message code plug support.

I did not have the latest from the DP3600 dm3600 yes, the German ami for the device
goes.

or knows someone how to use the equipment may xpr6550 ami flahen on DP3600?

someone has the ami software or a link or someone knows a group yahho
that can help me?

thanks for info hb9eze@... mail

Bruno,

If you are going to Friedrichshafen this week, go to the DMR Presentation on Saturday. Perhaps there will be someone there who can help program the XPR6550 radio.

Good luck!

80. Latest xpr 6550 GeorgiaDMR code plug

Yahoo group: Georgia_DMR
Date: 2012-06-28 21:55:17 UTC
From: Kevin King
Topic: 80 Message: 80
Attachments: 1 described; binary payloads are missing from this source WARC

Here is the latest code plug for the GeorgiaDMR network. It is for the xpr 6550.

We now have network mapping to DMR-MARC and the T6-DCI networks.

81. dmr 444.125

Yahoo group: Georgia_DMR
Date: 2012-07-15 19:20:11 UTC
From: Kevin King
Topic: 81 Message: 81

The DMR repeater went to KJ4KKB's repeater site (442.950) East Paulding County for some testing. Please see if you are in the coverage area.

Our Cbridge has had an upgrade and we added two IPSC managers.

There is some on going work to add some sites to the network as those get closer to construction I will pass on the details.
Sandy Springs site has met with some slow downs. The site is now under new management and the in house wireless internet that was in the site with our repeater is shut down. The company that ran it is gone. We will have to wait to see if it is going to be taken over and turned up. Otherwise we will need to have something new run to the room we are in. And with the new management in the building they have many projects higher on their list than we are. So for right now we are very happy that the current analog repeater is still running. As soon as we can get some internet to the site we will pick back up on that project.

It is probably time to start thinking of a web site for the network. Thoughts and suggestions are welcome.

Keep checking the Georgia_DMR yahoo group.

Case is not an issue. And if you are buying a domain I suggest buying ".com"
 when available always go for .com you do not want someone else buying it. Plus godaddy
has a special that you get ".info" free good for news and other expansions.

85. New repeater added to Georgia DMR network

Yahoo group: Georgia_DMR
Date: 2012-07-25 11:11:33 UTC
From: Kevin King
Topic: 85 Message: 85

I would like to welcome the 442.175 Color code 1 K4USD - Stockbridge Atlanta repeater to the GeorgiaDMR network.

The owner is John Burningham W2XAB.

The repeater is in low level testing. John is hoping to move to a site in Stockbridge/Morrow area. If you have any contacts for sites in that area please let us know.

So please say Hi to John and add his system to your code plugs.

The system is growing. We have a location coming available in metro Atlanta so for those that have said they have gear and need a location, time to get ready.

I also hope to hear from some other locations so stay tuned!

-Kevin

86. Network update.

Yahoo group: Georgia_DMR
Date: 2012-09-02 22:38:04 UTC
From: Kevin King
Topic: 86 Message: 86

It has been a bit since I have sent out any updates, so here we go.

444.125 has been running at the Paulding county site for a bit now. The coverage is good. Much better than the testing here at the house.

It is at the same site as the 442.950 pl 77. So if you can get that one you should be able to get to the turbo. It is on a lower antenna but still covers well.

Sandy Springs (441.950): The analog machine locked out the PA after the bad lightning storms went through 3 weeks or so ago. The building took several power hits and the PA was down after that. I went to the site cleared the errors in the log and rebooted the machine. It has been fine since.

I contacted Airband communications. They have a wireless distribution node in the rack next to the repeater. They can provide service, but the lowest rate they could quote was 130.00 a month for the internet connection. I may have to find someone in the company that understands I am not a business and do not need all the hardware to get the service. I just want an IP and a port on the switch. I am looking for no more than 60 a month for connectivity. So for now we cannot convert that site till we get some internet there.

Stockbridge (442.175): I have not heard much from John. He does not stay connected full time on the network. Please report if you can hear his repeater if you are around Stockbridge.

I am still working with other sites to get space with internet connectivity. Most of the sites that are possible to get into are not ready for internet. So we need to find hams in tall buildings. J Or look at building some wireless network hops.

Here is a current list of users registered with DMR-MARC radio ID's in the Area:

You can look at xpr 4550's or xpr 5500. They you have the standards and hytera radios. Price range is from 350 to 600.

Can you hear the 444.125 where you are?

On Sun, Sep 2, 2012 at 6:38 PM, Kevin King <kc6ovd@...> wrote:

It has been a bit since I have sent out any updates, so here we go.

444.125 has been running at the Paulding county site for a bit now. The coverage is good. Much better than the testing here at the house.

It is at the same site as the 442.950 pl 77. So if you can get that one you should be able to get to the turbo. It is on a lower antenna but still covers well.

Sandy Springs (441.950): The analog machine locked out the PA after the bad lightning storms went through 3 weeks or so ago. The building took several power hits and the PA was down after that. I went to the site cleared the errors in the log and rebooted the machine. It has been fine since.

I contacted Airband communications. They have a wireless distribution node in the rack next to the repeater. They can provide service, but the lowest rate they could quote was 130.00 a month for the internet connection. I may have to find someone in the company that understands I am not a business and do not need all the hardware to get the service. I just want an IP and a port on the switch. I am looking for no more than 60 a month for connectivity. So for now we cannot convert that site till we get some internet there.

Stockbridge (442.175): I have not heard much from John. He does not stay connected full time on the network. Please report if you can hear his repeater if you are around Stockbridge.

I am still working with other sites to get space with internet connectivity. Most of the sites that are possible to get into are not ready for internet. So we need to find hams in tall buildings. J Or look at building some

wireless network hops.

Kevin,

Can you give us an idea of the coverage on the DMR repeater?

Thanks,

Ken

It is roughly parts of Bartow, Cherokee, Paulding, Cobb. You might hit it from a hill top near you.

Here is the location:

https://maps.google.com/maps?q=11030+Cartersville+Hwy+Dallas,+GA+30132
<https://maps.google.com/maps?q=11030+Cartersville+Hwy+Dallas,+GA+30132&ie=UTF-8&hq=&hnear=0x88f549c8691425ab:0x33f0143c13092a48,11030+Cartersville+Hwy,+Dallas,+GA+30132&gl=us&ei=__ZEULiKKoKQ9gSHmoHQCA&ved=0CCAQ8gEwAA>
&ie=UTF-8&hq=&hnear=0x88f549c8691425ab:0x33f0143c13092a48,11030+Cartersville+Hwy,+Dallas,+GA+30132&gl=us&ei=__ZEULiKKoKQ9gSHmoHQCA&ved=0CCAQ8gEwAA

it is at the 70 foot level of the tower.

K4USD is currently only on the air when I am planning on using it since it is in my apartment with an inside antenna and running one watt; my wife doesn't like the fan noise and ethernet cable running across the floor and my landlord will not allow an outside antenna.

I have been looking for an affordable site in the Clayton/Henry County area that will cover where I live and/or work; I have not been having any luck.

I have a supply of DC backup connectors for the repeaters if anyone needs one let me know.

I have also acquired an IP<>USB adapter designed to allow connectivity to remote USB devices (such as the programming port of the 8400), I am going to be testing it for remote programming of the repeater over the Internet.

John, Inside the repeater is a fan switch, from the factory it come set to full speed. If you flip the switch it will set it to low speed and thermal. this will run the fan quite and slow until the inside gets too hot and it will speed up.

This should make it bearable to be around. As for the Ethernet cable you could use a wireless linksys or some such device to solve that issue.

Can not help with the antenna unless you have a small flag pole you want to keep out on the balcony. :)

93. DMR in Ball ground

Yahoo group: Georgia_DMR
Date: 2012-09-28 18:17:07 UTC
From: Kevin King
Topic: 93 Message: 93

Mark,

I was wondering if you have got your radio programmed and tried to get into one of the DMR repeaters. I think from a high spot you might get the DMR on 444.125.

Also if you have not join our yahoo group at Georgia_DMR@yahoogroups.com.

The other two repeaters are still low level, one in Stockbridge and the other in Powder Springs.

I will let the other repeater owners on the network say hi and encourage you to try to get on.

-Kevin

<mailto:jdbandman@...?subject=Re%3A%20FS%3A%20XPR-6500%20%2B%20cha
rger> "Jim Duncan" ku0g99

Good morning all! I am in need of raising some cash fast and am selling my near mint-condition XPR-6500 and charger. This is the radio that got me on Trbo in the first place. The radio is in excellent condition with no scratches, scuffs, marks, etc. It is already programmed with a broad range of talk areas (regions) and can be programmed with your radio ID and other preferences before shipping. My radio ID will be taken out of the radio so it WILL require programming at some point.

I'm asking $325.00 plus shipping (will all fit in a priority mail medium flat rate box) for the radio and charger. This is the Q split radio (403-470 MHz). Payment by PayPal, please.

Please contact me OFF GROUP at jdbandman@earthlink
<mailto:jdbandman%40earthlink.net> .net with questions or to
close a deal! Really hate to get rid of this HT, sentimental value, but in a "have to" situation right now.

Attachments: 2 described; binary payloads are missing from this source WARC

Take a look at these. One was produced by DMR-MARC and the other I put together for a list of radios.

The Georgia_DMR network will have a repeater set up at the hamfest. Sorry for late notice but it all just fell into place at the last minute.

98. A little hacking going on :)

Yahoo group: Georgia_DMR

From: Alan Adamson
Topic: 98 Message: 98

I should take delivery of a Hytera repeater in the next 2 weeks. Most likely when I get finished with some development for it, it will live at the top of the Bank of America building in ATL. :)...

To that end, I spent about an hour last night on another friends Hytera and we succeeded in figuring out some of the protocol. It's a rather strange animal, with a number of ports, and some funky protocol, but I've got the initial handshake figured and as well as some of the back and forth. I was able to take some perl scripts and get it to treat a linux box as a slave and send it data. While I didn't mess with the voice port, it was happily sending the control information, most of which is kinda easy to figure out.

Some may know that I've created the ability to link NXDN repeaters without all the hoops that either Kenwood or Icom make you jump through and I've down away with most of the limits as well. Hopefully, and if everything works out, I see now reason at the moment that you couldn't take and glue Hytera and NXDN together. I've got all the protocol work done on the NXDN side (well, at least 90% of it anyway). We know the various voice rates and how to convert between the ambe rate that DMR uses and the rate that NXDN uses (actually the same rate, one with FEC in the IP packets the other without but we know how to add and subtract that as well).

So, not a fast solution to get to, but hopefully one that will glue the 2 (or more) platforms together via software.

I know most of this group is Moto based, but I just couldn't bring myself to give them any of my money.... Lost of reasons most of them for the same reason that I can't give apple money... Closed environments are for closed minded people. :). While Hytera certainly *isn't* open, it doesn't seem to have the baggage that Trbo does.

Bottom line, we'll see, but it's looking good so far.

Just a tidbit more info...

I now have a Raspberry Pi setting on a VPN (only because that already existed) talking to another Hytera repeater as if it were a slave! :)... Once I figured out how to get the voice/data packets coming to me, all the other masters and slaves started sending me their voice/data frames.

I'd say at this point we are approx 40-50% good on the protocol, still a lot of work to do, but it's getting there...

Alan that is great news!

I am a little concerned about the Hytera choice, but I respect your decision and know the issues.

My concern over Hytera is that there are some feature incompatibility with TRBO.

In any event, I am excited to have a great site like that, for those of us in the North GA Mountains, that is the closest shot for us.

With the increased digital range, we might just be able to hit it from here!!!

Thanks,

Ken

Oh trust me I know exactly why I went Hytera and it was *exactly* for that reason... I have *NO* interest in being compatible with trbo.... For all kinds of reasons, but mostly because they seem to play the same way that d-star does... If you don't confirm to the assimilation, you get black listed.... Nope, have no interest with that.

My primary interest is attempting to link NXDN and DMR (hytera version only) together... That should be easily doable based upon what I've learned so far.

I went Hytera, because the robustness of the repeater is hands down better than the Moto version, and *I* hate messing with hardware, I want something that works and works well, and from all indications, Hytera fits that bill, both SU radios and Repeaters. :)

Sorry, it's just a thing I have with organizations that attempt to tell ham radio operators what they can and can't do... that just flies in the face of the spirit of ham radio and I have NO use for it :)... That and I could buy 2 more repeaters for the cost of a C-Bridge, and so far I don't need that anyway... So why go to a platform that is so restrictive and costly...

This is fun for me, if others want to play all the better, the more the merrier...

I'll keep ya posted as I poke along.. Between the 20+ NXDN sites that I'm working with and I've got 7 more that want to play that I'll be linking in, that's my primary focus, but I had some time, while I let the dust settle on the software I created over there, so I decided to play with DMR.

Ken,

Voice is interchangeable across DMR systems. Mototrbo breaks with the messaging convention, so a Mototrbo radio won't send or receive txt messages with other non-turbo brands, nor will they exchange position reports.

Why Motorola does this, I don't know, but they have a long tradition of doing things like this.

Personally, I prefer the Hytera radios-consistent human interface designs, easy access to CPS, and better ergonomics, as well as better audio, when compared to the Mototrbo. Plus, I don't appreciate Motorola politics.

Regards,
Shane

Sure, but it won't be connected to the trbo network (it can't be). I will have no issues with who uses it, that's what it will be up for, but note, it will also be used as I work on development stuff around the Hytera platform.

Folks,

I have been working with some of the new features on the c-bridge. We can now control and schedule talk group connections.

I have setup the DMR worldwide feed to come on line for the net on Saturdays and run for 1hr and 2 min. It will also come up when you key up the world wide talkgroup. It will shut off if the NA group is keyed local.

I also setup the "The bridge" talk group (tg 3100) this is an attempt to make state talkgroup routing. So if you key up TG 3100 on TS2 this will connect you to a state/us bridge. It will knock down if you key up the Georgia DMR TG (3113) on ts2.

Below is a request from the folks in Massachusetts that would like to open up feed of our state feeds to each other. So if you keyed up the Masss. State TG (3125) it would connect you to the state of Massachusetts. And the same on their side for us.

What do you folks think?

Oh and repeater #4 went up yesterday. It is 444.375 color code 3. It is located in bent tree above Jasper Georgia. We did not get to complete the work to connect it to the network. That will be at another time.

TG-3100 is still an interstate group, we just call it the bridge now.. and it is on TS2. The third machine is on a test pair and a lab/low level

So no need for you to worry about that.

Do you hear the new box your way?

I will make the additions now. And just FYI for everyone here. I know there are several websites with incomplete TG info. So this is my list as I know it so everyone is on the same page..
TG - Description

1 - "DMR-MARC"
Worldwide Net {Clear} <Slot-1>
2 - "DMR-MARC"
Local {Clear} <Slot-2>
3 - "DMR-MARC"
Nationwide Net {Clear} <Slot-1>
3100 - "DMR-MARC"
Interstate-1 {Clear} <Slot-2>
3113 - "DMR-MARC" GA
Statewide {Clear} <Slot-2>
3125 - "DMR-MARC" MA
Statewide {Clear} <Slot-2>
3126 - "DMR-MARC" MI
Statewide {Clear} <Slot-2>
3130 - "DMR-MARC" KS
Statewide {Clear} <Slot-2>
3153 - "DCI" WA
Statewide {Clear} <Slot-2>
3160 - "DCI" DCI 1
{Clear} <Slot-1>
3161 - "DCI"
Worldwide Net {Clear} <Slot-1>

3162 - "DCI" DCI 2
{Clear} <Slot-2>
3163 - "DCI" North
America Net {Clear} <Slot-1>
3166 - "DMR-MARC"
Test 1 {Clear} <Slot-1>
5054 - "DMR-MARC"
South Pacific QLD Statewide {Clear} <Slot-2>103100 - "DMR-MARC"
Interstate-2 {Clear} <Slot-2>
3017501 - "TRBO-6"

Topic: 106 Message: 110

And that is the wrong page! Not sure where that came out from. Maybe when we first tested with DCI..

Anyway here is the correct listing for GeorgiaDMR

TG 1 “DMR-MARC World Wide TS-1

TG 2 “local” TS-1&2

TG 3 “DMR-MARC North America TS-1

TG 3100 “T6-DCI “the Bridge” TS-2

TG 3113 “GeorgiaDMR Statewide” TS-2

TG 3777215 “T6-DCI Comm1” TS-1

This is all we have mapped in the C-bridge any other talk groups go nowhere.

We will be adding the individual state talk groups as we make partner connections to those stat C-bridges.

Topic: 106 Message: 113

Not really. If I understand that you are saying that programming you radio with all these will get you to all the networks. Each network has their own tg map, each repeater IPSC network anyway. Those do all lists might get you in the ball park. But truly it is each repeater owner or even radio user that determines what he uses.

For example if you try to use tg 3163 in Chicago you won't be heard. This is why I chose to keep the MARC TG's map to the same ID's as they use on their home network. Other networks map them to a different number.

So you really must have the TG map for the area Network you will be in. This is why we are working on the mapping of the state talk groups directly between c-bridges. That way your home state talk group will get you back to your home state. This is being done by the T6-DCI bridge partners.

Then it gets real fun when we turn up the hytera on the c-bridge…

All the talkgroups I posted are correct for radio wide programming across all networks, but obviously each c-bridge network owner selects whatever they want out of the list as you just pointed out...

And that is the wrong page! Not sure where that came out from. Maybe when we first tested with DCI..

Anyway here is the correct listing for GeorgiaDMR

TG 1 "DMR-MARC World Wide TS-1

TG 2 "local" TS-1&2

TG 3 "DMR-MARC North America TS-1

TG 3100 "T6-DCI "the Bridge" TS-2

TG 3113 "GeorgiaDMR Statewide" TS-2

TG 3777215 “T6-DCI Comm1” TS-1

This is all we have mapped in the C-bridge any other talk groups go nowhere.

We will be adding the individual state talk groups as we make partner connections to those stat C-bridges.

Kevin,

Just to clarify.

On my TG list I show TG-3100 as:

TG Name: Interstate-1

<Slot-1>

Are you doing 3100 as a different function other then "Interstate" comms?

Also I have in my roam list:

444.125 + color 3

442.175 + color 1

What is the 3rd repeater I am missing?

I'm moving one of my NXDN repeaters in the next couple of weeks. In prep for that, I'm going to re-use the current site and put up a Hytera DMR repeater.

Tomorrow if I can work out all the planning, 443.025 in Atlanta, well become a DMR repeater on the Hytera networks (connected to RI, TX and FL).

Don't hold me to this, but specifics below.

a) 443.025+ PL 127.3 (it will be running mixed for now as well @ 25khz)
b) 443.025+ Color Code 1

It pretty much conforms to the basics... TS 1 is WW, TS 2 lcl, etc and the basic TG's are the same

(understand, I'm a newbie around all of this, so I hope I get it right).

I have it's twin setting here on the floor, functional and on net as well.

To start it will be running at around 50W, but at some point, after I make sure it has no issues, we'll unleash 100W.

For those that know this sight, it has amazing coverage!

So, wish me luck! :)

Excellent Alan.
  I will test coverage on that one later this month.By the way, I recommend running your Hytera repeater @ 40 watts in a hot environment, 25-35 watts in a very
hot environment {like 105+ F} and 45 watts in a A/C cooled environment to keep your PA healthy.Other CPS important settings I haveFan on 48Fan off 40turn on all alarms.
Been running my repeaters with medium voice traffic and heavy data traffic for 6 months with no problems. My repeaters are in the A/C cooled environment setting. I have seen other repeater owners blow PAs with different settings so do your settings wisely.
Enjoy. Roberto

So cut me a little slack will ya, I'm still wet behind the ears with all the DMR stuff.

I got the repeater up... I decided that I'd just pull the NXDN, put the DMR in it's place and hook it up to the 100W PA that I had there.

It's a brand newish TE Systems and it worked great on the NXDN side. I knew that the duplexor had no desense at 80W... (nice thing about the NXDN repeaters, you can pull the the SNR reading and watch it when you key the repeater :)...).

This amp is a 20W in 100W out amp and so I had to play a little to get the level right from the Hytera repeater....

Once I got that done, I headed down off the building. Things seemed ok and coverage was as expected. I got home and checked against my baseline... HT low power, 50 miles away from the repeater, keyed it up, could hear myself just fine on my base unit, swapped around PTT's and everything was good... Similar coverage as NXDN.

Went to dinner with the wife, came out from dinner, saw that the repeater was keyed pretty constant... checked and it was only TS 2, but I couldn't hear it no matter what I did.... Drove home, tired the mobile still good. Signed on the repeater and Kevin came back to me... He was mobile on a Motorola.

Strange thing, he said that it sounded like the repeater has some intermod or desense as he had talked to another Moto guy and they both sounded broken, sometimes slightly garbled, what I call artifacty.

I tested back to back on my ht to my mobile and no issues... So, wonder if there is a Mot to Hytera repeater issue? that would be bizarre I suppose, but not impossible.

Anyway, I've got to run back down to the building tomorrow.... oh, and I figured out why I couldn't hear them talking... my HT was programmed wrong :(...

Anyway, it's alive... Let me know if you all think the AMP might be causing this distortion issue with signals... I might drop it off line and see if that clears up the issue...

443.025+ 127.3 PL (mixed mode analog)
CC 1
TS 1 - WW (on the hytera side as soon as I get the IP issue sorted out)
TS 2 - LCL, etc...

Alan

From: Mutual Aid Supplies, Inc.
Topic: 114 Message: 117

I wasn't ragging on you Alan. Just giving friendly advise before you blew your brand new repeater running 50 watts continuous.
Reference your field units breaking up issue, it could be alot of things. But if it was your external PA I would think everyone would be breaking up not just them, and I believe you said your transmissions were okay.
There could be several issues at play here. I would check setting in the hytera radios and repeater. RRS, GPS, beacons etc can all cause havoc if not set up correctly. Specially if they are polling impolitely on a slot that is busy.

So cut me a little slack will ya, I'm still wet behind the ears with all the DMR stuff.

I got the repeater up... I decided that I'd just pull the NXDN, put the DMR in it's place and hook it up to the 100W PA that I had there.

Sorry, I didn't include enough smiley faces in my post.... Didn't mean to suggest that I was getting ragged on..

I appreciate all the help. I made those adjustments too btw... Course running 16watts helps a bunch when driving the amp...

I think today I'm going to remove the amp, just to make sure, turn the repeater back up to 40W and see if I can figure out what the heck is going on with the IP stuff (It's very strange, but could have been an issue on my side that somehow crashed the IP support on the Hytera)..

Anyway, hopefully a better day today, and hopefully one that doesn't require all day to sort out :)

Thanks!
Alan

Ok, worked through the issues.

443.025+ PL 127.3 (analaog)
CC 1 (digital)

Its functional. I left the amp inline on it today after I had a conversation with another Moto radio driver and everything sounded good.

Repeater is smack dab downtown Actually, it's in the 5 points area. Antenna at 900' and running around 80W. Coverage seems to be really good. Solid 40 mile HT coverage as long as you have no immediate obstructions, Mobiles should work it a bit further. I was at 85 and Hamilton mill (granted a tall spot), but worked it with low power on an HT. I can also here is just fine at my house (that same area) on an HT on my desk. Site has always amazed me at how well it performs.... It's not on BOAP, that's where my NXDN is going :).

Internet is connected and functional, so while not a large network, it's a network :)...

1 - Lakeland, FL
2 - Atlanta (downtown and my home)
2 - Rhode Island (U and V machine)
1 - Laredo, TX
1 - can't remember where, Phoenix I think

Adheres to the MARC TG/TS scheme so program accordingly.

If you have any questions drop me a note...

Alan

Interesting. I checked their website, and it appears this is the *only* DMR product they offer. Everything else is either analog or dPMR...

Any idea who will be selling these in North America?

Strangely enough, after looking online it seems like the radio is mono band - either UHF or VHF. I kind of thought it was too good to be true for it to be dual band. They do appear to be MilSpec 810 which is good.

Take a close look to see if I'm correct about the dual band capability. I also could not find out anything about CTCSS or DPL or encoding. See anything?

If they truly are compatible with Moto and can be PL'ed or DPL'ed it is likely I will look into getting one...

Just got this from the manufacture. I was told I could get one for evaluation at 300USD.

Looks like the other products they have are Tetra? Need John to decode the vendor docs.. Maybe John can import some of these..

Sorry, from the Hytera network... But I just put it back online so it's as it was prior to me taking it offline....

getting on the trbo network with a hytera simply will never happen... A) they are strong on their lack of interest in a hytera every showing up over there and b) the protocols are dramatically different at the IP layer. :)

From: Alan Adamson
Topic: 130 Message: 130

We now have about 8 repeaters linked up.
South Florida
Lakeland Florida
Rhode Island (2)
Texas
Atlanta (2)
Arizona

We are also working on a few others...

We use the same TG/TS makeup as the MARC guys, the repeater in downtown atlanta is on 443.025+ CC1

Just figured I'd let you know what's connected. The one in Texas just moved to a perm site with about 50 miles of coverage around Laredo.

I have contacted the Hamvention and we (DMR people) can have a Sunday morning 1-hr forum on DMR.
If a few of the experts/powers in the DMR network projects (MARC, TURBO, HYTERA, etc.) are interested it could be a good thing for DMR and ham radio.

Topics that I fell should be covered include:

Basic intoduction to DMR
DMR Equipment availability, user radios and repeaters
Dual-mode (Analog/Digital) repeaters
C-Bridge
Overview of the different amateur DMR based networks.

If you are interested in presenting, please contact me ASAP.

Subject: RE: DMR-MARC Feedback : Request Repeater ID

Edwin, if you have already upgraded the repeater to a software version higher than 1.09.11 you can connect to my Master; if you are running 1.09.11 you can connect direct to the GA c-Bridge that Kevin (KC6OVD) runs. My Master is connected to the c-Bridge, but the c-Bridge can't handle software above 1.09.11 directly as the master. You must set the repeater to digital mode for IP Connect.

If you have not selected the color code, I would recommend Color Code 1 (one).

Hello Edwin. You must run in 100% digital mode to join our network. IP site connect is not supported in mixed mode. I have copied Kevin King who is leading our GA subnetwork. If you are interested in joining please make sure you have R01.09.11 repeater firmware at R01.09.10 subscriber firmware. Newer subscriber firmware is OK. You will need a subscriber ID too if you haven't applied. You can get that from the same website you used for the repeater ID. Please contact Kevin after you are all set with that. If you have any issues, please drop me a line.

Mike, AA9VI

Doug

I final had a chance to upgrade the repeater this afternoon to 12.0 or the latest far as a March release and moved it to a IPSC ready.

What's next?

Thanks for your help!

Just a note on programing versions. Please try to stick to these.

R01.09.10 subscriber firmware,
R01.09.11 repeater firmware,
and CPS v 8.0

will allow you to program 25 kHz channels without the entitlement key. I suggest you update only to that and not any farther unless you want additional, perhaps unnecessary, headaches.

All,

I'm looking forward to join the networks as a peer .

I was given ID 311308 on a VHF 147.075+ RPT and for all my subscribers 311304 and 3113023.

And everything ready to make the cut over to IPSC.

Far as I know I'm at the latest firmware (12.0.0)that offer from Moto.

Let's give a try!

Edwin, if you have already upgraded the repeater to a software version higher than 1.09.11 you can connect to my Master; if you are running 1.09.11 you can connect direct to the GA c-Bridge that Kevin (KC6OVD) runs. My Master is connected to the c-Bridge, but the c-Bridge can't handle software above 1.09.11 directly as the master. You must set the repeater to digital mode for IP Connect.

If you have not selected the color code, I would recommend Color Code 1 (one).

From: wb4dhc
Topic: 149 Message: 149

Hello,
Is there a human readable list of DMR/MOTOTRBO repeaters in Georgia. I don't have the Motorola software and nor easy access to a Motorola dealer so the codeplugs don't help much.

I'm considering getting into this digital mode but want to make sure that there is a reasonable chance that I'll use it at least in the areas I travel to in Georgia. Currently I'm based out of Flowery Branch.

Thanks for the feedback.

Yahoo group: Georgia_DMR
Date: 2013-06-18 23:24:41 UTC
From: wa4tij
Topic: 153 Message: 153

Hello All.

Out of curiosity, I went to the Dayton forum and ended up winning a UHF/403-470 (R.01.11.10) XPR6550 (from Sandy's). I've done some reading and have some basic questions.

On the "Request Subscriber ID" of http://dmr-marc.net/request_subscriberID.html there is a question about 'a Capacity Plus compliant ID'. How do I answer this?

On programming the rig, I've read about CPS. Is it better to go to a two-way shop, or order the program and cable from Motorola? I live in Woodstock....anybody near me? Is there a club?

Is there a local ham-friendly Motorola shop?

Thanks in advance,
Robert WA4TIJ

154. Re: [Georgia_DMR] Newbie with an XPR 6550

From: Mutual Aid Supplies, Inc.
Topic: 153 Message: 154

Robert.

That question only pertains to the people that also use their Motorola radios on Capacity plus systems as well as Conv. Systems. So judging by your statements, you are only using this for DMR-MARC so you can skip that part.

Roberto

On the "Request Subscriber ID" of http://dmr-marc.net/request_subscriberID.html there is a question about 'a Capacity Plus compliant ID'. How do I answer this?

Hi, Ken.

Where is your shop located?

The Vertex stuff looks just like the Moto gear (but I understand the free Vertex version of CPS does not work with actual Motorola gear).

Are the Vertex and Motorola handhelds both made in Malaysia? I sure like the build quality of this XPR6550. It reminds me of the HT220 I owned 30 years ago.

CUL,
Robert

I would guess that most dealers could sell the cp200d for less that you see used XPR radios on e-bay.

Good morning Kevin.

164. Detailed Service Manuals

Yahoo group: Georgia_DMR
Date: 2013-08-17 13:45:40 UTC
From: Ken Bryant
Topic: 164 Message: 164

Just wanted to pass this along, this is for everybody's information.

Motorola is no longer making detailed service manuals available on MOL for the second generation radios such as the 3000, 5000 and 7000 series.

If you need a detailed service manual you have to make a specific request for one through Motorola.

The file is then sent on CD from Plantation with all sorts of legal warnings on it such as "DO NOT DISTRIBUTE."

If you get a copy you will be asked not to share with anyone, each copy has to be requested by each individual wanting a copy.

Apparently the issue is that the Chinese counterfeiters were using the very precise manuals to manufacture off of!

Thanks,

Ken

Sandy Springs repeater is now on the network. Kevin and I hooked up a clear wireless node and it seems to be working well.

You now have 6 repeaters connected to the GeorgiaDMR network.

We have 2 ½ high sites. One in jasper, one at sandy Springs and one is East Paulding county.

The Jasper site isn't located on a high elevation tower (~120 feet if my memory serves me correctly) but it does benefit from a high height above average terrain in certain bearings from the site due to the base elevation of the tower. The challenge that would be faced with a "tower" location such as that is one where construction costs for feedline, signal loss and maintenance. There are only a handful of rooftop sites in Atlanta that would meet that requirement (1000') and issues with intermod (everyone else is up there too for the same reasons) and simply obtaining permission to place equipment by the property owner/management company become obstacles to achieving the objective.

Given some of the features of DMR site connect capabilities, high sites may not be the only solution, roaming and site interconnect can achieve the same objective while making site acquisition and construction costs significantly easier. It is just a matter of internet connectivity at the locations, connections to the other repeaters/cBridge and radio programming.

Jasper and Sandy springs are more than 1000 ASML. I will have to check, but the Paulding box might just make that number also.

Ken, Have you acquired a site yet? It has been quite some time.

I think I might have acquired access to a site but the only problem it is surrounded by a ring of mountains (we are in a bowl here) so probably nobody else from the Atlanta area can get into it.

There is another option, Brasstown Bald they highest point in GA at 4784ft, but that is a bit tricky politically and will take some time.

Ken, I think you are missing the whole point of the Georgia DMR network. We have coverage in Atlanta and are expanding that coverage. But up a box in your bowl and connect to our network and then there is no need for anyone in Atlanta to be able to hit your box. The roaming hand offs work great.

If you build it they will come!

It is unlikely that there will be any sites installed by this group that would reach into your area. We simply do not need large coverage area sites. As it is most high remote sites would not have adequate cost effective internet. Internet connectivity has been the most challenging part of any of this. Even our in town site is on a wireless link. Simply due to not being able to get service for less than 100 bucks a month.

Brass Town ball would be nice, but it would be a nightmare to keep up. And how many users would it support? That is a long drive for me to maintain. But don't let me discourage you from going for it. I would be happy to connect you to our network whichever way you go. Have you reached out to the NC group to see what they are building your direction?

Right now we need coverage south of Atlanta , another box to the west and one up the I 85 area.

I have been trying for a number of years to gain access to a good site on the south side of Atlanta in Clayton or Henry County with no luck. We have no buildings taller than 3-4 stories and even most of those are locked into commercial site contracts. The existing analog repeaters don't want to migrate to digital.

I would at this point even be interested in a good site in the ATL downtown area that would offer good coverage within the I-285 loop. It would also be great if the site had both UHF and VHF (for travelers passing through). It is too bad the one great DMR coverage repeater in Atlanta is Hytera.

Internet access is also an issue, but secondary to a good site.

Yahoo group: Georgia_DMR
Date: 2013-11-04 23:14:42 UTC
From: Ken Bryant
Topic: 187 Message: 187

Some new stuff coming:

* New MOTOTRBO(tm) Digital Voting functionality which uses Voting Repeaters and strategically located Satellite Receivers to eliminate coverage holes and balance inbound/outbound RF coverage.
* Improve GPS, Text Message, Raw Data communication performance and reliability through the use of Location and Registration in a single CSBK transmission.
* Utilize the Radio Management (RM) enhancements for software license management and activation, offline programming, fill up/down in grid shortcuts and access control per RM component.
* Other radio enhancements: Telemetry commands in SL radios, Flexible Receive List for user-managed Talkgroup Scan in Capacity Plus and LCP, Permanent Bluetooth Discoverable Mode for indoor location and Work Tickets for XPR5000 mobiles and XPR7000 portables.

Just a heads up for your all,

Thanks,

Ken

Robert,

I am a Motorola dealer based in North Georgia just up the road from you. I have new surplus radios at below dealer cost and I am the largest used MotoTRBO dealer in the US.

If you need any assistance please feel free to contact me directly.

Kevin and the Gang,

Robert makes a good point, do we have a repeater list and if not, should we not put on together?

Thanks,

Ken

Robert, Have you experimented with roaming on the hytera? Now that we are getting multi-site coverage this is getting usefull.

It seems the commercial rigs once you set roaming you lose normal scanning. At least I have not found the right balance and Talk group selection.

I am going to try working with channel pools next.

Playing around with roaming a little bit last night I discovered that before CPS for the hytera will allow you to choose roaming checkbox you have to check off another box something to do with IT. Anyway once you do that then roaming list will appear in the drop down menu with scan list option. I didn't see a way to enable both roaming and scan list at the same time

Yes you can have roaming and scan at the same time on the hytera radios. It is called "Rx Group List"
First go to "DMR service> RX group List> {Then create your lists}
Then under your digital channel, enable the Rx group list member you want for that channel.

Try that with roaming and see how it works. Do you have a spot where you can get between two sites and test it? Also try roaming and scanning your analog channels.

Kevin,

I do not know if you are talking to me, Robert, or Derwin but this is for digital channels ONLY, can not scan analog. I personally do not enable scan on any of my radios on digital nor do I recommend it to ensure enhanced features work 100% including the roaming feature {this goes for any brand radio not just Hytera}. Of course, I know most of you just want to talk and listen to anything and everything, but on my system I use all the features the radios are able to do on a regular basis. Scan causes conflicts, delays, and confusion even on P25 systems. So I suggest have a secondary radio for the purpose of listening to other traffic.

200. Re: Vertex

Yahoo group: Georgia_DMR
Date: 2013-11-13 13:10:16 UTC
From: Ken Bryant
Topic: 193 Message: 200

Kevin,

In addition to Motorola, I am a full line Vertex dealer, I can also get Hytera if need be.

I always recommend Motorola especially on the portable side because the advantages of the Impres battery technology far outweigh the small savings on the Vertex over Motorola.

The portable high capacity batteries are $70 and up the Impres means you get more out of them and a longer life, total cost of ownership over time is lower with Motorola.

Also, in Vertex there are some advance feature quirks that are not completely compatible with the Motorola format.

On the personal front, as I have said, it makes no sense for me to put up a repeater for just one person, me.

Every time I get a repeater in, it is sold to a customer. I can't keep them in stock anyway.

I am looking for a less expensive and more practical way to connect to the gateway, anybody have any ideas?

Thanks,

Ken

I would like to get an idea of the maximum number of range miles people are getting out of TRBO, with or without the aid of a repeater.

I have tested VHF portable to portable from inside vehicles on rubber ducks simplex at a max of 7 miles, fairly unobstructed line of sight.

Obstructed on a UHF portable is 3 miles, on an SL7550 1.5 miles.

I have tested VHF high power mobile to mobile ¼ wave antenna simplex at a max of 24 miles, fairly unobstructed line of sight.

How far has anybody else gotten?

If you are reporting a repeater experience, please indicate the gain of the antenna, the power out, and list the average height of the antenna above the surrounding terrain (AAT).

Thanks,

Ken

Topic: 203 Message: 205

The Jasper, GA repeater has an average range of around 30-35 miles dependent on heading from the site on a handheld and up to 50 miles on a mobile.

The Sandy Springs, GA repeater averages around 20 - 25 miles dependent on heading from the site on a handheld and up to 30 miles on a mobile.

The terrain is the largest impacting factor for the two sites mentioned.

Given the roaming capability and IPSC capabilities that are being built out for the individual sites, I see the approach not being so much based on high profile sites but a mix of high, medium and low profile sites with roaming capabilities to bridge common talkgroups as users roam.

Kevin,

I agree, instead of worrying about the politics, internet access and expense of high sites, we should all focus on a network type model, the voting receiver feature is coming out soon and many vendors are now offering Radio Over IP (ROIP) products.

Thanks,

Ken

Welcome Matthew to DMR.

You will be the second DMR repeater in SC, N2ZZ has one in Atkin, SC.

Currently N2ZZ is connected to the GA-DMR network, you are welcome to join him. Changes that are happening to the c-Bridges will mean that we will be able to give you a SC state network on TS2 in the very near future until such time as SC wants to host their own c-Bridge. Your other choices are the NC or direct to DMR-MARC.

I would strongly recommend you and N2ZZ discuss the plans for SC.

If you are ready to get online, just give me a call (it is faster than email) and I can talk you through the configuration for connecting to the GA-DMR network.

Subject: RE: [nfarl] DMR in Atlanta

We go DMR in Georgia, Alabama and north, south Carolina.

I copied the Georgia_DMR yahoo group.

The SCI radio is creating quite the Buzz. John W2AXB has one and it testing it. Let’s see what he has to say about it.

Anyone know of any DMR repeaters in Atlanta? CSI has a UHF DMR portable for $160 I heard.

Thanks,

Don Woodward

Nice LOOKING radio, but seems to only be mono-band from the photo, even though the spec sheet is misleading.

Kevin, what exactly are you interested in hearing about?

That radio is just a hytera radio re-branded for Harris. I been using hytera radios on the GA DMR system since the GA repeaters have been on the air.

Kevin,

Wondering if you do an analysis with a percentage rate on activity for all the talkgroups on the GA DMR system. Would be curious to see which are the busiest Tg's, I always seem to have luck finding someone on "GA Net" {TG-3113} on both hytera and motorola systems. And maybe it would be a good idea to do a spreadsheet and add it to the files of which talkgroups are active under the GA DMR bridge.

I would also like to take a poll on how many of you have the feature "radio check" enabled?

227. R02.30.02 BEACON Bug

Yahoo group: Georgia_DMR
Date: 2013-12-18 15:49:24 UTC
From: <w2xab@...>
Topic: 227 Message: 227

There is a "bug" in the R02.30.02 that effects how we use IPSC. We have the BEACON disabled; but in R02.30.02 there is a bug, the beacon is CONTINUOUS after 60 seconds of inactivity on the repeater if set to DISABLE. Further, if you enable the BEACON and set the interval time to 600 seconds, it BEACONS every 60 seconds.

I have reported both these issues to MotorolaSolutions.

John, W2XAB

I sell them for $249.99 and free shipping. Software is free on their site

However I want everyone to be aware these radios will NOT do roaming. AT least not yet. I already talked to CSI about this requirement in DMR radios.

Analog channel can be 12.5 or 25 kHz
However to clarify if you are using a digital DMR channel it is 12.5 by default because DMR uses 12.5kHz not 25

Whats the thoughts on the best mobile single band antenna UHF

238. Re: mobile antenna

Yahoo group: Georgia_DMR
Date: 2013-12-28 17:09:32 UTC
From: Ken Bryant
Topic: 237 Message: 238

You asked what is the best mobile single band antenna for UHF.

For me it is one that provides the best performance.

You will want the highest gain typically found which is 5db and that equates to an approx.. 30" whip.

For amateur use in the amateur bands, I prefer Diamond.

For public safety grade, I prefer Antenex/Laird.

This is based on customer's comments, personal research and testing.

Antenex/Laird is the vendor to Motorola and they have some wide band antennas that do 440-470 with no tuning or cutting.

These wide band antennas are a little more expense but well worth it (no hassle with cutting/tuning) especially if you are working ham bands as well as GMRS and commercial bands in UHF.

They have the same wideband in VHF and critical for ARES/RACES and public safety use.

I usually sell and carry both.

Please don't hesitate to call if you have any questions.

Derwin:

For UHF antennas I am a fan of the commercial series antennas.
Larsen or Laird Tech are two I use with no issues.
For Larsen the NMO440 Series and for the Laird the B430 Series.

I would recommend you order either with the shock spring.
I also know of a couple of guys that swear by the PCTel (Maxrad) antennas as well.

Also use a decent commercial series NMO mount with decent coax. (Double Shield or LMR type).

Last piece of advise, buy from a reputable dealer and NOT ebay where you will end up with some knockoff.

Take Care,
Tom

Kevin , I would like to confirm that the southeast talkgroup is on TS1? I noticed on the Tack map on the DMR-MARC website that Florida has TS 2 listed. I didn't see any indication on the Georgia Tacks so I programmed my radio for TS 2 before I reread your post indicating TS 1. Can you confirm which it is for sure. I would hope there would be a consensus from state to state.

Yes it is on time slot 1. On the GeorgiaDMR network only Georgia state and local traffic is on TS2. There is a legacy interstate “the bridge” that is on TS2. That may change.

Ok thanks Kevin I will reprogram my radios as soon as I get my computer back up. Lost a bunch of programs and files I had put on since back in August which included all my CPS stuff and files

243. Problem with registering Dynamic Mixed Mode (DMM) EID

Yahoo group: Georgia_DMR
Date: 2014-01-04 21:09:57 UTC
From: Ken Bryant
Topic: 243 Message: 243

Happy New Year to all!

My customer and I are trying to resolve an issue with registering a DMM EID on a repeater, and thought somebody else might have some experience with this.

The repeater is an XPR8300.

The EID is valid and verified by Motorola and shows being available on the server.

We have upgraded the CPS to 9.0 (previously tried 8.0) and the repeater firmware to R2.20.12 (previously tried R1.09.11).

When we try and register, we find the EID DMM Feature on the server, the blue progress bar goes all the way across, and the process says "Done."

Immediately, thereafter, we get the following error messages each time:

"Unable to contact the License Server, Please try to register again later. Error 29441"

"Unable to contact the License Server, Please try to register again later.. Error 29459"

I know from experience an EID will process on an older version of the CPS.

I know from experience the registration server can be at times busy or not available, we are have tried different times and different days.

I know from experience that anti-virus and firewall issues can cause connectivity problems and we have done everything we can to eliminate those.

We want to try everything else first, before we further upgrade the CPS and/or the repeater firmware.

Motorola technical group says it is a connection problem but clearly the EID is verified on the server (shows 1 available).

Does anybody have any ideas?

Thanks,

Ken

Ken When I loaded the EID for DMM on my 8400 part of loading it on the repeater was the checking back to mother moto that the EID had be loaded and activated in the repeater. Somehow when you are connected to the repeater and loading this in CPS, it cannot contact the server. In this case moto is correct. But without more info I have nothing I can suggest. You will have to find what is changing the routing on your pc/laptop you are programming with when trying to load the option.

Ken,

With the new entitlement server and processes around the recent CPS 10 / Firmware 2.3 release you may have to be at CPS 10 to complete this load if you purchased the EID after the conversion date.

I seem to remember seeing that somewhere, just not sure where.

Good luck -
JMS

There is a Repeater in Akin South Carolina. It was low level in a home, but when it gets to a good covering site it should cover into Augusta.

Where are you located Scott?

250. Links to DMR-MARC

Yahoo group: Georgia_DMR
Date: 2014-01-11 01:22:38 UTC
From: Kevin King
Topic: 250 Message: 250

Folks,

We have tracked down an issue with dropped packets between GeorgiaDMR and DMR-MARC networks. It is a network provider that is in the path between us and DMR-MARC. This is affecting any traffic to and from DMR-MARC across that path. Right now us and one other network in the west travels across that same provider. Not much we can do about fixing that. So we are trying to rout traffic around that segment and to a different c-bridge. You may experience times of no traffic on the NA or WW talk groups. This is just while we swing it over and see if the path works. At the same time we are trying primary and secondary routing. This is something the c-bridge has but no one has tried it to see how it works. If all goes to plan we will have the NA & WW talk groups feeding to us from the W0PM c-bridge.

259. 443.025 in Atlanta

Yahoo group: Georgia_DMR
Date: 2014-02-04 22:59:10 UTC
From: <adamson_alan@...>
Topic: 259 Message: 259

If all goes as planned, I'll be putting 443.025 back on the network. it's a Hytera DMR repeater (actually running in mixed mode), it's on the top of 191 Ptree downtown and is running 70-80W.

It's been off the network while some new software was being created, but thats no functional and so it will be linked with about 50 other Hytera repeaters around the country and international.

It follows the same MARC TG usage and TS usage.

I'll confirm it's back up and running on the net as soon as I get down there and update it's firmware and change a single IP address.

It *IS NOT* a part of the MARC network just a newly created Hytera network. But DMR is DMR from a user radio stand point (well not technically true, but close enough for this dicussion). Specifics about it's CC etc are listed in the archives of this forum.

Just wanted to let you know,
Alan

If you are following DMR-MARCs & GA DMR list then local should be the following:
TG-3113 - "GA-DMR" GA Net {Clear} <Slot-2>

I really suggest we keep the same TG mapping across all ham DMR groups to not create confusion and a programming nightmare for people that travel across country.
TG-2 - "DMR-MARC" Europe Net {Clear}
<Slot-1> So that is already taken and we can not label the same talkgroup two different names in the hytera radios.

A little more info.

I actually have 2 repeaters, one at my house (my development repeater if you will) and the one downtown.

They are both connected and I just figured out how to connect TS2/TG2 (Local) such that both are linked there as well, but they don't go out over the net when that happens as you would expect.

A couple of links for people if curious.

Last heard: http://176.10.105.236/dmr/ http://176.10.105.236/dmr/

Online Repeaters: http://176.10.105.236/dmr_rptstatus.htm
http://176.10.105.236/dmr_rptstatus.htm

Routing Groups: http://176.10.105.236/group.php http://176.10.105.236/group.php

The TS2 info as it relates to the US isn't valid, TS2 is only used locally *there are some exceptions*, but that's pretty much it.

have fun, just remember, if you come up on TS1/TG1, you are bringing up a bunch of repeaters... :)

If you remember that is where I wanted to start. But 900 ham and turbo rigs just do not play nice. In order to do it you have to hex edit the code plug. I did probe the CSI group for interest in a 900 DMR repeater and radio. I would love to see a csi 900 radio system.

For it to fly around here the price for the user needs to be in the cs 700 range. And even then 900 is a flaky bunch. I could not get any takers 3 years ago to buy mobiles or handhelds.

While I am interested in the 900 Mnz Trbo I think the interest level is too low to make it worth while at this time to invest in it. I would much rather see the 440 trbo repeaters grow. The existing infrastructure still has a low of growing to do especially in Georgia and other areas of the country. Seems like California and the western states have grasp the technology and ran with it much more than the rest of the country. The one thing that create some immediate growth is allowing the Hytera group to connect in. I know that is a sour subject but just my thought. I live in the north Georgia area and have jumped on the DMR bandwagon but coverage is slim and want to see it expand by leaps and bounds.

From: <w2xab@...>
Topic: 266 Message: 271

The problem is that the Hytera DMR IP is not compatible with the Mototrbo IPSC. If the c-Bridge would support the Hytera protocol or someone wrote a bidirectional format translation utility the interconnect would not be a problem.

I am a Connect Systems dealer, the MSRP is $285 for commercial users, dealers are not allowed to advertise below that but obviously can sell lower.

There are no plans for 900Mhz that I know of, VHF and mobiles coming soon.

I am just up the road if anyone wants to see one.

Thanks,

Ken

The CS700 radio pricing has brought DMR to within reach. However I don't want to buy a radio then have no use for it. Based on the repeater XLS in the files section it seems that the local repeaters are Inside 285, South of ATL and one up around Jasper. Does anyone have any info on the coverage in the Gainesville/Flowery Branch area from these systems? I would expect it to be on the fringe area at best but hoping someone can say for sure as I would really like to get some experience first hand.

Tnx

280. Update on the SL Series

Yahoo group: Georgia_DMR
Date: 2014-04-23 22:47:30 UTC
From: Ken Bryant
Topic: 280 Message: 280

Motorola has recently released a new high capacity battery and battery door for the SL.

The new battery is 2200mah compared to the previous high capacity battery at 1900mah and is only slightly thicker in profile.

Motorola has redesigned the drop in charger and issued a new part number for it to handle the additional thickness, otherwise the functionality is the same as previous.

Motorola has reduced the price point of the drop charger compared to the older part.

Thanks,

Ken

None of them are Color code 0 on the map I am looking at on DMR-MARC at http://dmr-marc.net/repeaters.html

Kevin King also said the three marked as Color Code 1 are correct but local repeaters covering a very short distance.

the knowledge you need is not something that can NOT easily be explained in an email.

1. Every repeater has two time-slots (TS), each time-slot is totally independent of the other TS.

2. each repeater is connected to a bridge (c-Bridge) which controls what TGs are available on each TS.

3. only one talk-group (TG) can be active on a TS at one time. TGs are FIFO priority.

4. different networks have different standards for which TGs are on which TSs.

5. a combination of frequency, TS, and TG makes up a channel.

I do not know where that TG mapping came from but it is not what we use here.

I wish folks would stop trying to understand Georgia by looking at something from the west coast or some other system. The files section of this group has or did have files with what is what in Georgia.

Remember the networks are going to carry what is on the local c-bridge for the repeater network you are on.

Topic: 321 Message: 334

Thanks John I understand that for the most part. Going by the chart above if a NORCAL station is transmitting on NA TG 3 TS 2 once it crosses the bridge if indeed it does should we hear his transmission in Georgia on out NA TG 3 TS 1 ? I thought NA was NA no matter what network. I may be right and it because the Sandy Springs repeater is or was off line at that time un be knowing to mw? I know a lot of this is elementary to the ones of you guys that has been involved from the get go but for us new comers its a bit over whelming to know what to expect and when to expect it. Much like Dstar was in its infancy it carries a hugh learning curve. As much as we hate to bother you guys with questions there is so much that is not covered or mentioned on the web and we have no where or nobody to go to except for the ones that have been in it a while.

Thanks for all the info and help as we improve our skills

I think the Bent Tree repeater has had some issues for a while to a certain degree. When I first entered DMR I talked to Kevin from my driveway on a portable. Fast forward 6 -7 months and I can't even bring it up from my house with a 18 db gain antenna at 30 feet with a 40 watt mobile. I don't know but it just seems unusual to me. I'm glad you mentioned it Don

The vdx-720 is a hardware clone of of XPR-6550. The VDX-7200 is a mobile clone

The EVC-539 is their top of the line new modil portable

These are VERTEX-STANDARD radios, NOT Yaseu crap. The radio are fully DMR compadable, but note that their REPEATERS are NOT compadable with the Mototrbo IPSC.

Vertex has cancelled the VXD series (Motorola clones) and most dealers no longer stock them.

The new EVX series will replace it.

Vertex is basically a less featured entry level product line.

I am a dealer for both Motorola and Vertex and personally I think the quality and features of the Motorola brand (such as Impres batteries) and worth the difference in money and actually have a lower total cost of ownership over time.

Thanks,

Ken

That's basically what I told my friend that is thinking of getting into DMR. He had ran across an ad for them and ask me if I knew anything about them. That aside the fact that HRO is going to carry any brand or model of DMR speaks for itself as far as the future of DMR goes. Hopefully it will be bright but Georgia, as well as other states , have got a ways to go to catch up to other parts of the country in promoting it and building out the network. Got a radio form you at the hamfest received it about a week later and was able to use it one or two days before discovering the 2 repeaters crapped out.

I have to take exception to your comments, " the two repeaters have crapped out."
To be clear all Three repeater that make up the network are running. Yes one repeater (444.375 Bent Tree) is reported to have low signal strength. The Rdac shows good rx levels. This is what happened to the last two repeaters on this site. We have to work this out with the repeater site owner. You have to remember the site is Hugh's and he has let us put our DMR repeater on his freq at his site. Sand Springs is working just fine. The repeater covers just as it should. The internet connection at the site is down. Solutions are being investigated.

I will be very honest, the primary coverage areas of the GeorgiaDMR network are the Top end and hwy75 North. Mainly the Cobb, Cherokee and Paulding counties. The reason for this is the owners of the repeater and network hardware are in these areas and we had existing sites. So naturally we are going to build out in the areas we are.

Our main work now that we have run this for some time. Is to build the network and improve the operation of the IP networks needed to run the system. So much of what is being worked on is invisible to the end user. The deployment of VPN networks and better network paths to the partner networks are needed to support the repeater growth.

I would love to have the funds and time to complete a full system build-out and cover all of Georgia for everyone with no cost to end users. Those that know me know that is more then just talk.

As always I encourage those that are not happy with the GeorgiaDMR system to step up and help build out the network. Anyone that would like to install a repeater and connect to the network is welcome.

KC6OVD has done a fine job bringing DMR to the North Atlanta area. It is time for a effort on everyone's part to assist in either talking local clubs into converting an underutilized frequency pair or new pair into a DMR repeater.

It costs less than $2,000 to convert an existing system, and possibly double that for a new system (repeater, duplexer, antenna system). There is also the monthly cost of Internet.

If someone has access to a good coverage site, let the rest of us know and maybe we can pool some funds to get another system on the air.

If anyone know if a good site on the south side, please let me know!

I am a member of NFARL - I doubt you will find anyone willing to switch that repeater to DMR - too much analog traffic.

The 444.375 Jasper/Bent Tree repeater is a much better site but something is going on there and the TX is low - hopefully it will get figured out as time permits.

I have been involved with the Bent Tree site for a number of years, and I believe that first and foremost we need a new, commercial grade antenna up there. Amateur grade antennas have not survived the environment well, since at that elevation winter weather more closely resembles what you might expect in New England! The last time an amateur grade antenna failed, we dusted off an OLD Station Master that had been used previously, and although the VSWR was acceptable, it was actually cut for use up on the commercial frequencies. Also, I have my suspicions about the condition of the short jumper between the antenna and the larger diameter feeder.

Ok then, how high is the Sandy Springs site?

What needs to be done there?

Thanks,

Ken

Scott, nothing on the books at this time. Would you like to take point on that area?

Ken, Looks like we have a bad PA on the 8300 on Bent tree. Depot flat rate is like 400 something?

yes it is 36 floor to the antenna. The issue is internet connectivity. the node we had online has stopped working. We are going to try another provider.

A good (Commander Technologies) 10 dB 455-5N
http://www.commandertech.com/pdf/basestationantennae/455-5N.pdf
http://www.commandertech.com/pdf/basestationantennae/455-5N.pdf costs about $866.25 from Tessco plus shipping.

If you are mounting on a tower you have to add the necessary mounting bracket/arm, plssibly new feedline and hangers. You also have to consider the cost of installation.

From: Reed Krenn
Topic: 356 Message: 374

The PA has failed, and is currently delivering a whopping 400 mw to the duplexer. We have learned that there is a design "feature" in the 8300 series repeater that results in premature and catastrophic PA failure. There is a possibility of a one-time fix, and modification that could restore service and prevent a similar failure. If that doesn't work, we are potentially facing a $600+ repair bill.

We are making arrangements to re-visit the site to see if the one-time fix and modification will work.

Regarding the antenna/jumper: The antenna is an old Station Master that was used many years ago on the 440 FM repeater at this site. It is actually resonant in the commercial band, but the VSWR curve was still relatively flat at 444.375. That said, since we are operating on a frequency well below the designed resonance point of the antenna, there may be some excessive electrical down-tilt as a consequence. Some down-tilt is desirable when the antenna is at 3200 ft AMSL, but the wide frequency excursion may be giving us too much of a good thing! At the time we put the Station Master back up, the tower climber expressed some concern about the flexible jumper between the antenna and the 7/8 in Heliax. Mainly he was concerned that the N connectors were "chalky" in appearance, and he did his best to brighten them up to ensure good connections. We didn't have a spare jumper with us, so he went ahead and used what we had.

Stay tuned.....

Reed / WW3A

My cost on a depot flat rate repair is far less than $400.

Jumpers are not that expensive, if it does not test out, let's replace it.

Thanks,

Ken

This PA issue on the 8300 is a known problem, one of the reasons why Motorola obsoleted the 8300 and came out with the 8400 as an upgrade.

Thanks,

Ken

For general awareness, there will be an attempt made at performing a "no cost repair" for the Bent Tree location perhaps as early as tomorrow. Depending on timing there may also be an attempt made to bring Sandy Springs back on the network as well.

If the no-cost repair doesn't work, then I suggest we get the unit repaired. I am willing to help cover the cost of repair; if we split it between a few of us it should not break the bank!

If a new jumper is needed, if you know the length and connectors needed on each end I may have a new one in my stock or I can get one made.

Don, It looks like DCI has changed the way they are feeding the talk groups. It should have been working. But I can see that some reconfiguration is going to be needed. I am going to wait a bit to see if they make more changes.

Kevin, I moved my c-Bridge over to NATS as per the instructions without any problems.

DCI has not broken the TAC310 connection; if you are getting it as an INBOUND connection, you need to email NO7RF after you make the move as he has to delete his OUTBOUND connection, if you connection is OUTBOUND you can delete it on your end.

Hi all!

I have surplus to my needs, 3 impres PMNN4077C batteries that are brand new in the box. Never used.

For the xpr6300-6500 series radios.

$40 for 1 battery or $110 for all 3!

Thanks for the consideration prior to throwing them on the bay.

407. New DMR Reeater in Stockbridge GA

Yahoo group: Georgia_DMR
Date: 2014-09-18 02:52:07 UTC
From: w2xab@...
Topic: 407 Message: 407

The Southern Crescent Amateur Radio Club in Stockbridge GA is putting a new Mototrbo DMR repeater on 443.225 +5.0 CC1 (KJ4KPX); the repeater will be colocated at their 145.17 repeater site.

I expect to have it operational before the end of the month, internet connectivity may take a little longer.

410. Commercial Series SL300

Yahoo group: Georgia_DMR
Date: 2014-10-07 03:26:46 UTC
From: Ken Bryant
Topic: 410 Message: 410

Motorola will officially release the SL300 tomorrow on Tuesday, October 7, 2014.

It will be available for shipping on October 13, 2014.

Since it is a lower tier, it will not replace the SL7550, but it has some pretty nice advanced capabilities and features of its own.

I will have some literature and presentation material if anyone is interested, please contact me off list.

Thanks,

Ken

Product Features:

- Digital (3W) and Analog (2W) Mode

- 2 Zones (Display Model)

- Dual Capacity Direct Mode

- 6.25e / 12.5 kHz Channel Spacing

- 1 Programmable Side Button. Display Model Includes Menu List

- Basic Privacy

- Busy Channel Lockout

- Emergency

- LED Battery Indicator

- Lone Worker

- MDC1200

- Quik Call II

- Radio Check (Decode)

- Radio Inhibit (Decode)

- Remote Monitor (Decode)

- Scan - Priority / Dual Priority

- Time-Out-Timer

- Voice Announcement

- Uses MOTOTRBO CPS

- Radio Management Capable

Programmable Features:

- All Alert Tones On/Off

- Brightness (Display Model)

- Emergency On/Off

- High / Low Power

- Monitor

- Nuisance Channel Delete

- One Touch Button

- Permanent Monitor

- Privacy On/Off

- Repeater / Talkaround

- Scan On/Off

- Scrambling On/Off

- Site Lock On/Off

- Tight / Normal Squelch

- Voice Announcement On/Off

- Volume Set

- VOX On / Off

- Zone Toggle (Display Model)

417. MotoTRBO Anywhere

Yahoo group: Georgia_DMR
Date: 2014-10-23 19:03:17 UTC
From: Ken Bryant
Topic: 417 Message: 417

I am speer heading an effort to explore the feasibility of bringing MotoTRBO Anywhere to as many Amateur DMR networks that have an interest.

I would be looking for champions for the cause as well as investors myself included to cover the initial startup (a small one time user access fee could be used to re-pay the initial investors/investment).

This would avoid the expense and capacity issues with garage or home based repeaters and TurboVUi control stations for those of us not in an RF pathway or simply want to connect to DMR networks while on the go.

http://www.motorolasolutions.com/US-EN/Business+Product+and+Services/Software+and+Applications/Two-way+Radio+Applications/MOTOTRBO+System/MOTOTRBO_Anywhere

Essentially MotoTRBO Anywhere allows users to access the network with an Android or iPhone.

Please respond to me privately off list with "MotoTRBO Anywhere" in the subject line.

Thanks,

Ken

From: Kevin King
Topic: 420 Message: 422

I have given up on DMR-MARC database, I have sent them corrections 4 times and they just cannot keep the GeorgiaDMR stuff correct. We use CC3 for the first repeater on the same freq, then as we go clockwise we go to the next odd cc. so 444.125 is in east Paulding co. and on the air/networked. Sandy Springs is cc3 on air/not networked at this time Nic has been replaced, but cannot get a MAC loaded in the card. Jasper is onair/networked. 442.450 is in NE Atlanta near lake lanner. Low level/dummy load/networked. Valdosta is off network set to analog at last report. I have no info on 444.025. 442.950 is not on air at this time.

Subject: RE: [Georgia_DMR] Georgia Repeater database Update request

I have given up on DMR-MARC database, I have sent them corrections 4 times and they just cannot keep the GeorgiaDMR stuff correct. We use CC3 for the first repeater on the same freq, then as we go clockwise we go to the next odd cc. so 444.125 is in east Paulding co. and on the air/networked. Sandy Springs is cc3 on air/not networked at this time Nic has been replaced, but cannot get a MAC loaded in the card. Jasper is onair/networked. 442.450 is in NE Atlanta near lake lanner. Low level/dummy load/networked. Valdosta is off network set to analog at last report. I have no info on 444.025. 442.950 is not on air at this time.

Here is the list of Georgia Repeaters from the DMR-MARC site.

Are there any corrections that need to be made (frequence, City, Color Code, etc.); are all these repeater active? I want to print some handout for the Stone Mtn Hamfest next weekend.

Is there a better location for the ATLANTA repeaters?

Okay, I couldn't take the comments anymore about the upside down and reversed image.

Took some camera adjustment and I had to learn to operate the radio upside down but I now have the radio orientation in the video correct.

I have even adding some additional points and some narration (hope the volume is okay).

Excellent! Thank you

Is there a single button action to enable scan on/off? That's the one button I use the most. Can you program the "Programmable" button for short/long press?

Also, can you do the "lock/unlock" when powering on?

430. Re: SL300

Yahoo group: Georgia_DMR
Date: 2014-10-27 14:58:57 UTC
From: Ken Bryant
Topic: 427 Message: 430

Elton,

The single side button has two settings and can be programmed for both SHORT and LONG Press.

If you program one of the presses above for the action list, you can scroll through and change SCAN on/off.

I don't have unlimited time to make these videos and the password lock is pretty sophisticated.

The manual spells out this process which is done with the channel toggle in combination with the side button.

The User Guide outlines the process. Email me if you need the guide.

If I get enough requests, I will do a video.

I am thinking about doing an unboxing one.

Please don't hesitate to call or email with any questions, we are available 24/7, nights and weekends.

Please let me know if you ever need anything Motorola.

Please don't hesitate to refer us to others!

Ask us about our price match guarantee!

Ask us about our rebate or trade in promotions!

We do upgrades and downgrades!

Ask us about our current inventory of specials at below dealer cost!

Ask us about our customer referral program!

We are the largest pre-owned MotoTRBO dealer in the US.

We are not just a "ham friendly" radio dealer, I have been a licensed amateur radio operator for almost 20 years.

We work very hard to offer the very best pricing in the country, typically we are the lowest.

We ship world wide!

We don't just sell radios, we provide solutions and support!

Thanks,

Ken Bryant

Motorola is working on releasing a Handheld Control Head for the mobile series.

It will have a display, navigation, full keypad and every button and LED known to man.

This should help with the safe driving issue (over the front display) and for better remoting options.

It is a beautiful thing!

Probably Bent Tree 444.375 even though it’s quite a ways away it’s in a great spot.

The Sandy Springs repeater probably would too, but I believe it’s still off the Internet due to a network issue on the repeater.

443. MotoTRBO Anywhere (MTA)

Yahoo group: Georgia_DMR
Date: 2014-11-11 22:02:28 UTC
From: Ken Bryant
Topic: 443 Message: 443

After some extensive consultation with the head shed at Mother M, MTA does not look like it will be offered for conventional systems in 2015.

So the enterprise level solution is out for now.

This leaves the individual control station solution, perhaps we can all do a group buy and get that cost down.

Contact me off list if anyone wants to champion that cause.

DMR-MARC has informed me that they do not want this type of connection on their network except in the sandbox.

The other networks have expressed no issue with it.

Thanks,

Ken

444. MotoTRBO Firmware release 2.4

Yahoo group: Georgia_DMR
Date: 2014-11-13 03:40:08 UTC
From: Ken Bryant
Topic: 444 Message: 444

In the next week or so, Motorola will release firmware 2.4.

Some of the highlights are as follows:

* Selectable Audio Ambiance and Audio Profiles, for better speech intelligibility and loudness.

* Over the air updates to a Battery Management application database, to monitor the long-term health of IMPRESTM batteries.

* Text to Speech will now read out loud the content of received Job Tickets and Text Messages and the aliases of Zones, Channels and Programmable Buttons.

* Event Location Updates can report the status of peripheral devices (doors, pumps, plows, etc.) along with vehicle coordinates and time stamp.

* MOTOTRBO Handheld Control Head can be a great solution for vehicles with limited user space.

I will release some presentation material after the official launch.

Thanks,

Ken

449. New repeater

Yahoo group: Georgia_DMR
Date: 2014-11-18 04:33:35 UTC
From: Ken Bryant
Topic: 449 Message: 449

Hey,

I wanted to let everyone know about a new networked DMR repeater than has some pretty awesome coverage for NW Georgia.

It just went up this past Saturday.

WB4JGI
Bean Mountain
Cleveland (Benton) TN
Approx. 3000 ft.
Station Master
MTR3000
60 watts
RX: 443.825+ CC: 1

Local TG =TG 27500 on TS 1
NC-PRN = TG 2 on TS 2 is linked full time with the rest of the NC-PRN network.
TAC 310 = TG 310 on TS 1
TAC 1 = TG 8951 on TS 1
DMR-Marc Southeast = TG 3174 on TS 1
DCI Bridge 2 = TG 3100 on TS 1
EchoTest = TG 9998 on TS 1

To immediately disconnect any on demand TG send: TG 27000 on TS 2.
They do ask that if anyone monitoring an on demand TG not to unlink/disconnect it, unless they initiated it.

Thanks,

Ken

Angle linear preamp with the moto pre-selector for the MTR2k/3K is the best. I have used the ARR preamp and the pre-selector. Best solution I have done is separate TX/RX antennas. RX at top of tower with tower mounted pre-amp and separate tx 30ft lower. Using a pre-selector at repeater with notch can for tx on the rx line and a pass can on the tx line.

454. FPP for XPR7550

Yahoo group: Georgia_DMR
Date: 2014-11-20 16:22:29 UTC
From: Ken Bryant
Topic: 454 Message: 454

Over the past several months I have working with an overseas Motorola ADP to get the cost down of FPP for Gen 2.

Previously, one had to purchase a separate proprietary option board and with customs duty and overseas shipping that was getting to be unfeasible price wise.

We were now able to work the firmware on the standard Motorola GOB which cuts down on cost and hassle of dealing with overseas, although there is still the laid back response time, bank transfer fees, etc.

As with the XPR6550, I am a distributor for the developer and work to streamline the process for the ham community as a single point of contact.

Please contact me off list if you are interested.

Thanks,

Ken

In looking at a lot of the features being rolled out, holy cow, I am blown away.

This is why everybody should be paying for your copy of software, not only do you get what you pay for, but it supports and ensures that you continue to get new and improved features and enhancements.

The HHCH will be out in early December.

The Firmware will roll out next Wednesday, Nov 26.

Thanks,

Ken

456. SL7550 "Motorola" Lettering

Yahoo group: Georgia_DMR
Date: 2014-11-22 14:18:21 UTC
From: Ken Bryant
Topic: 456 Message: 456

There is a known issue where the "Motorola" lettering on the front escutcheon has a tendency to wear or come off.

Usually the "M" on the far left or the "A" on the far right go missing after a while.

These are metal or faux metal adhesive backed letters that fit on the recessed flat spots for each letter outline.

I have acquired a few replacement letters from manufacturing for some customers of mine that want to replace theirs.

I was successful in getting a part number set up with Motorola but there is a minimum order of sets that just doesn't make sense if all you need is a couple of letters.

If anyone is interested, please contact me off list.

Thanks,

Ken

457. SL300 performance

Yahoo group: Georgia_DMR
Date: 2014-11-22 14:23:41 UTC
From: Ken Bryant
Topic: 457 Message: 457

We have done some relative field strength testing on the SL300 compared to the 4 watt handhelds with the full length whip.

It appears the Motorola claim on the new patented internal antenna design are true, there was only a 1-2 db difference in performance between the SL300 with 3 watts and the stubby and the 4 watt handheld with the full length whip.

Amazing.

Thanks,

Ken

Don,

None of the new MARC talkgroups have been added. Are you interested in the NET or worldwide English coms?

It can be added to the c-bridge.it would be on TS1, TS1 is for all out of network TGs. My thought would be to add it with on demand and scheduled for any net that may occur with priority to NA and TAC310/311.

Topic: 456 Message: 469

Tac13 is not generally available on the NCPRN system.

But a technet is on Sundays at 8-9 pm on TAC310. A Q-n-A session follows at 9pm

NCPRN is more closely aligned with the DCI group than DMR-MARC talkgroups.

The Dmarc NA Talkgroup ID 1 is not the same talkgroup as the TAC1 talkgroup ID 8951. Even tho TAC1 is listed as DMR-NA on the NCPRN.NET webpage.

If you have not done so I recommend studying the trbo.org pages.

Each network manager can set up as they see fit. It took me weeks to see the coorelation to DCI's setup.

If you want to listen via an online source Norcal streams most nets at vu.trbo.org

Hope this helps

471. Thanksgiving and Thanks.

Yahoo group: Georgia_DMR
Date: 2014-11-26 11:42:35 UTC
From: Tom Power
Topic: 471 Message: 471

Sometimes all of the bickering clouds the fact that we are thankful and at this time of Thanksgiving, my thoughts turn to appreciation and thanks, and I think it is a good time to say thank you.

For the volunteer folks working behind the scenes, spending countless personal hours issuing radio ID's and keeping DMR-MARC going, Thank you.

For all the cbridge owners and others investing their personal dollars, volunteer time, and other personal resources to keep all of the Amateur DMR networks going and expanding. Thank you.

For the people that have written newsletters, done power points, given presentations at clubs and hamfests, written booklets and other materials and payed for these out of pocket to spread the word of DMR to the ham community, Thank you.

For the repeater owners that have spent countless hours and dollars to help the spread of the DMR networks in the ham community, Thank you.

For the folks that have spent personal time and resources to have tables at hamfests and ham conventions to spread DMR to the ham community, Thank you.

To all the folks running websites, databases, writing software, experimenting, and other computing resources to help promote and serve the DMR Amateur community, Thank you.

For the "ham friendly dealers" that work with us hams, taking less margins, answering questions, and sometimes pulling their hair out in order to serve the Amateur community.. Thank you.

To anyone that has done their small part to answer a question, answer an email from a newbie to DMR, or any other small part spreading DMR or helping, Thank you.

Thank you to everyone, and may you, your families, and friends have a very safe and Happy Thanksgiving.

Folks I am sorry for missing the requests and approvals for the group. I am in California, my mother passed away Monday. I am using the web based mail and all the yahoo admin messages hit my spam folder. I hope I cleared up the approvals and messages to the group. Bear with me while I am away. Any Questions regarding the network Kevin can answer.
Thank you Kevin de Kc6ovd

492. TalkGroups

Yahoo group: Georgia_DMR
Date: 2015-04-03 11:32:03 UTC
From: ke4okd_wqly786@...
Topic: 492 Message: 492

New to DMR and have exhaustively read the DMR for Dummies, and other literature but much still left to be understood therefore:
Question; If my local DMR repeater does not indicate they have some of the talk groups programmed in (and may not have them programmed), if they are PTT, like the Parrot TG & the TAC310 and others, can I still use them by programming them in to my radio and then depressing the PTT or kerchunking the machine?
Any and all direction (Elmering) is greatly appreciated.
Thanks,
Gregg / KE4OKD

From: w2xab@...
Topic: 492 Message: 493

The Amateur Mototrbo DMR Network is a three level network: Repeaters, Distribution Bridges, and Core Bridges.

The repeaters are basically dumb when it comes to Talk Groups, they pass whatever the user sends to the repeater out the transmitter and also out the ethernet port via an IPSC connection to a Distribution Bridge and/or other repeaters on the IPSC network. Most repeaters only have a connection to a Distribution Bridge.

The Distribution Bridge manages the Talk Groups that are made available to the repeater; some Distribution Bridges have only a small subset of Talk Groups, other Distribution Bridges have a much wider variety. I have 27 Talk Groups available on my Distribution Bridge (http://www.k4usd.org http://www.k4usd.org). If a repeater operator is not happy with the Talk Groups made available to them, they can always switch to another Distribution Bridge that can service them with what they want.

The Distribution Bridges have peering agreements with other Distribution Bridges and the Core Bridges; this is how they obtain the Talk Groups. There are two primary groups running the Core Bridges, DMR-MARC and NATS; both offer redundancy Core connections to the Distribution Bridges. The peering agreements typically specify how and to whom the Talk Groups may be distributed by the Distribution Bridges, some Talk Groups are open to everyone, other may be restricted to a geographic area.

Sorry... can't believe I forgot to put that in there... my bad.

K4USD Network - Kingsland, GA

W1KFR 444.625 +5.0 MHz Color Code 3
(C-bridge partner of DMR-MARC)

TS1 TG 1 - WW (PTT)
TS1 TG 3 - North America
TS1 TG 9 - Local Repeater
TS1 TG 13 - WW English (PTT)
TS1 TG 310 - TAC 310 (PTT)
TS1 TG 311 - TAC 311 (PTT)

TS2 TG 2 - Local (FCDMR Net)
TG2 TG 3112 - FL Statewide
TS2 TG 3113 - GA Statewide
TS2 TG 3125 - MA Statewide (PTT)
TS2 TG 3139 - OH Statewide (PTT)
TS2 TG 3174 - SE Regional
TS2 TG 3100 - Bridge (PTT)
TS2 TG 8951 - TAC 1 (PTT)
TS2 TG 113 - UA English 1 (PTT)
TS2 TG 123 - UA English 2 (PTT)
TS2 TG9998-Parrot (PTT)
TS2 TG9999-NoCal Audio Test (PTT)

ALL PTT Talkgroups have an inactivity timer of 3 minutes

FCDMR is First Coast DMR consisting of:
Kingsland, GA
Jacksonville, FL (Downtown)
Jacksonville Beach, FL
Palm Coast, FL (Garage Repeater Testing Phase, Soon to move to St. Augustine, FL)

Hope this helps.

It is more than just if the Bridge supports the TG, the Bridge Manager must be programmed to allow specific TGs from a repeater to pass through the Bridge.

You need to ask your repeater operator what TGs they have active.

I would like to issue a challenge to each repeater owner in Georgia to see to it that their repeater info is updated on the DMR-MARC site using the new Kingsland info as a pattern. The Kingsland repeater info is the best I have seen. As I stated before it leaves no doubt what TG's and TS's are being used and for what purpose. Not only will this help the daily user but also the traveler passing through town that would need to program his or her radio before leaving home. DMR is difficult enough to understand so lets try to ease the burden and simplify the process of gathering info.

Also since this group is the first place most folks go for info on DMR in Georgia lets try to keep the latest condition of the repeaters and status of the network posted here in a timely fashion.

Lets put our best foot forward and make DMR users feel welcome to Georgia

Does anyone have any information on what talkgroups are available on the GA DMR repeaters?

The DMR-MARC map is outdated on some of them, (Sandy Springs, Jasper)
For example TAC 310 is available on Jasper, but it isn't listed.

We NEED to get these updated. When we get travelers coming to the area, like myself,
I visit Jasper frequently... would like to know what is actually available on these
machines.

If you send me a lost of the talkgroups, I will see to it, that they get updated correctly
on the map.

What is on the spreadsheet is what we have. I lean toward supporting the tac and the bridge for out of area contacts. Remember with only two timeslots having all TG from all systems just makes a big mess and no one can use the system well.If there is something you need while you are here let me know and I will see if I can support it. do remember I have the allstar link available.

The Allstar link effectively connects TG 5 on the Georgia DMR network to Allstar that would be able to be reached from any existing Allstar node or the web console that can be found at www.allstarlink.org. I believe that it is presently set for TS2 on those repeaters serviced by the Georgia DMR c-bridge.

Well the repeater list says something about TG 5 being associated with the allstarlink system. Thats all I got to go buy cause I don't understand a thing about all this DMR. When you think something makes sense its all wrong.

Call me stupid

Allstar node 29963 is on TG5 TS2 On the GeorgiaDMR repeaters. What are you expecting to find or hear? Are you on one of the repeaters or are you on the allstar network somewhere?

That is what should happen. No one must be listening to the system. Did you key up and give a call?
When I first played with that I had it on tg 3113 the georgia st net. but took it of that and on to tg 5 so any experimenting we do does not disturb all the tg3113 users.

Hi everyone,

I just tried to access 29963 via the web transceiver, but it doesn't auto-connect, and when I press the CONNECT button, nothing happens. Other nodes seem to autoconnect without a problem.

Am I missing something? Or am I on the "Blacklist"?

Chrome is definitely a no-go. Apparently they haven't been playing nice with Java for a while now. Firefox works, and I have been able to connect to W5JR's collection of nodes automatically OR manually. For some reason, though, 29963 is being stubborn.

Weird science....

Chrome is definitely a no-go. Apparently they haven't been playing nice with Java for a while now. Firefox works, and I have been able to connect to W5JR's collection of nodes automatically OR manually. For some reason, though, 29963 is being stubborn.

Weird science....

539. Atlanta Hamfest

Yahoo group: Georgia_DMR
Date: 2015-06-01 00:07:59 UTC
From: tepower@...
Topic: 539 Message: 539

Good Evening Everyone:

Hope to see everyone at the Atlanta Hamfest next Saturday.

Next Saturday is the Atlanta Hamfest
When: Saturday, June 6, 2015. Gates open at 8:00AM – 3:00PM.
Where: Jim Miller Park located in Marietta, GA.
More Info: http://atlantahamfest.com/wordpress/ http://atlantahamfest.com/wordpress/

Some DMR Activities at the Hamfest:

Forum B from :
11AM-12PM Introduction to DMR (John Burningham W2XAB)
John is the guy that "wrote the book" on the Intro to Ham DMR. If you haven't seen it at Dayton or other Places:

(Amateur Radio Guide to Digital Mobile Radio (DMR): http://www.k4usd.org/guide.pdf http://www.k4usd.org/guide.pdf)

John is also hosting a DMR Table inside. Stop by and say hi and introduce yourself.

Ken, K1DMR, from Two Way Digital, a Georgia Ham Friendly Moto Dealer will be there with a table inside.

If you are interested in putting up a DMR repeater in GA, John's table is the place to stop by and get the questions you want answered.

See everyone there,
Tom
W8RED

540. Georgia Repeater Discounts from Today's Atlanta Hamfest

Yahoo group: Georgia_DMR
Date: 2015-06-07 00:41:25 UTC
From: tepower@...
Topic: 540 Message: 540
Attachments: 1 described; binary payloads are missing from this source WARC

Good evening:

Good to see those that stopped by the DMR table at today's Atlanta Hamfest.
Also those that went to John B's, W2XAB, DMR forum.

Traffic was a little light at the hamfest, one thing DMR that came up of interest to those interested in DMR in GA are some specials for the expansion of DMR repeaters in GA by our ham friendly Moto Dealer here in GA.

See attached if you, your club, or group has an interest in expanding DMR in GA by putting up a DMR repeater.

Also, if you have an interest in contributing financially in GA towards more repeaters, but can't do a whole repeater or site, please email me privately offlist, as there are a few of us that are looking for partners in putting up more sites around GA and Metro Atlanta areas.

Thanks and good seeing everyone,
Tom

The repeaters that worked into Dallas are the 442.950 (kj4kkb) and the 444.125 (kc6ovd)
 Both are offline due to infrastructure issues at the host location.
I am not aware of a DMR repeater in Dallas proper.

I am in Tulsa, OK and just built a new repeater for Venus, Texas. Not sure of the coverage up into Dallas (TX) but, it is on 441.725 cc 1 under KN5TX call.

They are on the lone star network. So, their TG's are on their web site: http://www.texasdmr.org/ <http://www.texasdmr.org/>

On TS 1: 1 (WW), 3 (NA), 14 (Spanish WW), 310 (TAC310), 3100 (DCI Bridge), 9999 (NorCal Audio)
On TS 2: 2 (local), 3148 (Texas state), 3175 (TX/OK Regional)

Hope that helps.

Rick, wd5etd

PS. I lived and still work in GA frequently thus the interest in this group.

Pete, Jasper resets each night. the cellular network we have it on rolls the ip addresses so it messes up the nat/port info to the rest of the network. you must have been up very late to notice that. Or the site took a power hit in a thunder storm. The AC power at the site is a bit sketchy at times.

I have some old UPS units that were for the old XT PC. it set on top of the xt and the monitor set on it. has switches on the front to control the components. In fact this very unit is common to see on sci-fy shows as a prop in a stack of stuff!
anyway it uses two 6 volt gel pack alarm batteries. we could hook it to a larger 12v gell cell. I have two of these in the attic over the garage.

Showing that it is back online on the cbridge as of 5 hours ago.. Could be a power issue again at the site. There is something funky with the electrical up at the site.

I think we are all sliding into the combiner of old age! :) All combiners have loss! This will really mess with you. Both repeaters were at the same site. Edwin KJ4KKB is or has got married and has less radio time. So I am looking for a new home for the one repeater. 444.125.

Kevin:

If I get an antenna up high above the trees (40-45’ probably) - it’s 13 miles line of sight. I was able to hear and use the repeater at 250mW in the right place in my home when it had the power issue.

We can try to link Internet from my home or I am happy to chip in on a wireless plan. Or, I have AT&T for my cell service – I could add a device on to my shared plan.

At one time I had a 70’ tower here with a remote receiver and a link to my old repeater north of Ellijay – we ran 250 mW on the link – one of these days I am going to put up another tower. I have a base and 20’ of Rohn 25 that I plan to put up at some point and then add to it up to 50’ or 60’.

588. W8RED DMR Digital Repeater Now in Snellville

Yahoo group: Georgia_DMR
Date: 2015-11-04 11:22:46 UTC
From: Tom Power
Topic: 588 Message: 588

Good Morning:

RE:
W8RED Repeater (MotoTrbo DMR)
442.600003 +
Color Code 3
Network: K4USD Cbridge Partner

The W8RED repeater that was home location based for testing for the last 6 months or so at my home in Loganville has moved to a new site high site in Snellville GA. It is on a temporary antenna half way up the tower at the moment and as soon as tower climbing is complete in the next few months will have a new Andrew Commscope DB408 antenna on top of the tower. Coverage is still decent and has been tested for the Stone Mountain Hamfest at the Gwinnett County Fairgrounds, and from Lilburn to Lawrenceville and out to Loganville on a handheld. Mobile Coverage is wider.

Please feel free to use the Repeater

Repeater details:
Motorola SLR5700 @ 50 watts
New 7/8 Hardline
Internet: Comcast Business - Dedicated to Repeater
Network: K4USD.org (all Listed Talkgroups on www.k4usd.org Available)
Site should cover about 9000+ licensed hams with the new antenna

Snellville Mountain (W8RED DMR Repeater):

This site would not be possible without the help of the following people, and my sincere thanks goes out to all of them:

John Davis, WB4QDX for helping secure the location, he was instrumental in securing the site, working with the property managers on logistics, installation, meeting the internet installers, and numerous other help and tasks to secure this location.

Eddie Foust, WD4JEM for his full day of tower work, climbing and installation on the tower.

Tom Welty, N4TAW for his help with the installation and assistance in the project.

Robin Cutshaw, AA4RC, for his help with the installation and assistance in the project.

David Adcock, KA4KKF for his help with the installation and assistance in the project.

Frank Lombardi W2FAL for his help with the installation and assistance in the project.

John Birmingham, W2XAB, for providing the K4USD Cbridge the site will connect to, his advice and overall assistance with the project.

Ken Bryant, K1DMR, for his help in getting all the equipment ordered, logistics for all the the equipment, delivering equipment to me, and numerous other items to numerous to list.

The group is currently in negotiations for a couple of other high site DMR repeaters (watch for another announcement this week) and is also interested in talking to others interested in expanding DMR around Georgia. We are especially interested in talking to folks with high sites with existing repeater pairs that are interested in converting to DMR as frequency pairs are running out on UHF in Metro ATL/North GA. Stop by the DMR booth at the Stone Mountain Hamfest this weekend and say hi or chat.
On Sunday, John W2XAB will be doing a forum on DMR as well at the hamfest. John W2XAB will have his K4USD portable repeater inside at the hamfest connected to the network as well and should give coverage inside the metal building.

Thanks,
Tom Power

Canton is on the air, you need to hunt down KD4KHO who operates it. It may be operating from his home and not have much coverage.

I spoke with KD4KHO on S.E. yesterday. It is in fact a portable repeater at his house. Not very good coverage for now. IF he finds a site to put it on he may do that. But for now he's not looking... just uses it for himself at home.

Good Morning:

RE:
W8RED Repeater (MotoTrbo DMR)
442.600003 +
Color Code 3
Network: K4USD Cbridge Partner

The W8RED repeater that was home location based for testing for the last
6 months or so at my home in Loganville has moved to a new site high
site in Snellville GA. It is on a
temporary antenna half way up the tower at the moment and as
soon as tower climbing is complete in the next few months will have a
new Andrew Commscope DB408 antenna on top of the tower. Coverage is still
decent and has been tested for the Stone Mountain Hamfest at the
Gwinnett County Fairgrounds, and from
Lilburn to Lawrenceville and out to Loganville on a handheld. Mobile
Coverage is wider.

Please feel free to use the Repeater

Repeater details:
Motorola SLR5700 @ 50 watts
New 7/8 Hardline
Internet: Comcast Business - Dedicated to Repeater
Network: K4USD.org (all Listed Talkgroups on www.k4usd.org Available)
Site should cover about 9000+ licensed hams with the new antenna

Snellville Mountain (W8RED DMR Repeater):

This site would not be possible without the help of the following people, and my sincere thanks goes out to all of them:

John Davis, WB4QDX for helping secure the location, he was instrumental in securing the site, working with the property managers on logistics, installation, meeting the internet installers, and numerous other help and tasks to secure this location.

Eddie Foust, WD4JEM for his full day of tower work, climbing and installation on the tower.

Tom Welty, N4TAW for his help with the installation and assistance in the project.

Robin Cutshaw, AA4RC, for his help with the installation and assistance in the project.

David Adcock, KA4KKF for his help with the installation and assistance in the project.

Frank Lombardi W2FAL for his help with the installation and assistance in the project.

John Birmingham, W2XAB, for providing the K4USD Cbridge the site will connect to, his advice and overall assistance with the project.

Ken Bryant, K1DMR, for his help in getting all the equipment ordered, logistics for all the the equipment, delivering equipment to me, and numerous other items to numerous to list.

The group is currently in negotiations for a couple of other high site DMR repeaters (watch for another announcement this week) and is also interested in talking to others interested in expanding DMR around Georgia. We are especially interested in talking to folks with high sites with existing repeater pairs that are interested in converting to DMR as frequency pairs are running out on UHF in Metro ATL/North GA. Stop by the DMR booth at the Stone Mountain Hamfest this weekend and say hi or chat.
On Sunday, John W2XAB will be doing a forum on DMR as well at the hamfest. John W2XAB will have his K4USD portable repeater inside at the hamfest connected to the network as well and should give coverage inside the metal building.

Thanks,
Tom Power

Yahoo group: Georgia_DMR
Date: 2015-11-15 16:04:45 UTC
From: Ken Bryant
Topic: 596 Message: 602

I haven't noticed any receive problems from the site.

Several folks have gotten in from 20-25 miles with a portable.

Personally, I have had a solid signal 45 miles from the repeater with a mobile (1/4 wave antenna).

There were probably be some blockage to the immediate South understandably so because of the Bank of America building.

We are going to re-check and optimize the repeater/pre-amp if necessary in the next week or so.

If we are justified in increasing coverage, we can raise the antenna a little higher and increase the gain by 3db with a DB420.

We thought given the current site profile, that would be overkill to start with.

We continue to look for partners who are site owners or those with site access or repeater owners with high sites in the South, West and North Atlanta Metro areas.

Thanks,

Ken

604. DMR added to Gwinnett ARES

Yahoo group: Georgia_DMR
Date: 2015-11-15 20:54:00 UTC
From: wb4qdx@...
Topic: 604 Message: 604

With the addition of two new repeaters in the Atlanta area, Gwinnett ARES is adding a DMR radio to its Emergency Communications Trailer. The trailer already supports D-STAR and Fusion and the addition of the Motorola XPR4550 will add DMR capabilities.

Gwinnett ARES is very active in supporting emergency communications and provides communications resources to Gwinnett Emergency Management and other entities. The trailer, built by Gwinnett ARES members, can support many modes including FM, D-STAR and Fusion on VHF and UHF, DMR on UHF, and HF voice and data. Other digital data modes include FLDIGI, packet, D-RATS and Winlink.

The addition of DMR is an important addition to the communications capabilities as DMR grows in Georgia.

Topic: 596 Message: 606

I can confirm the shadowing to the south of the repeater. I left the AMRC Hamfest late Sunday morning, heading back to Florida. Running 25 watts with a rooftop mounted B-10 (NMO), I had solid coverage until I got down near Hartsfield-Jackson Airport on I-75. At that point, I was told I was in and out of the repeater, mostly out. I bumped my TX PWR up to 45W, with no improvement. I could still hear the repeater very well until about the Henry County line, with "hill-topping" for several more miles.

Thanks for the efforts securing this high site in Midtown. I'm glad to see DMR continuing to flourish in Georgia.

Reed / WW3A

K1DMR should be still up.

From the previous threads, we might be experiencing a receive problem, which is intermittent depending where you are.

This is an installation pain, where the CPS might need tweaking.

We plan to visit the site on Saturday, and we think we have the problem identified.

We will also make more receive enhancements at that time.

We would be interested in finding a partner or access person for a high site near Hartsfield Jackson.

Thanks,

Ken

Some installation teaks and follow ups were performed this afternoon.

We have realized a -30dBm increase in receive performance.

We have scheduled another visit in 2 weeks to see if we can squeeze another -10dBm or so.

We are getting reports of HT coverage at -80dbm out to 25-30 miles.

My thanks to the team today:

Tom Welty, N4TAW

John Birmingham, W2XAB,

Tom Power, W8RED

For their dedication, perseverance, selflessness and expertise.

Thanks,

Ken Bryant

<Georgia_DMR@yahoogroups.com> wrote:

Some installation teaks and follow ups were performed this afternoon.

We have realized a -30dBm increase in receive performance.

We have scheduled another visit in 2 weeks to see if we can squeeze another -10dBm or so.

We are getting reports of HT coverage at -80dbm out to 25-30 miles.

My thanks to the team today:

Tom Welty, N4TAW

John Birmingham, W2XAB,

Tom Power, W8RED

For their dedication, perseverance, selflessness and expertise.

Thanks,

Look down in the body of http://www.k4usd.org/ There is one there for the MD380. I found it yesterday while on the plane so haven't loaded it yet. Looked good in the programming software.

Ken:

I am located in Berkeley Lake. I am able to use the repeater, most of the time, with a dual-band mobile antenna outside on my front porch with the well-known and well-respected baking sheet as a ground plane. I say most of the time as, during the business day, it is sometimes hit or miss.

It would be great to have walk-around ht coverage in the house, but I don't have that on 2m either. I guess I need to move.

Let me preface this by saying I don't understand the nuances of DMR yet.

Ken, I agree, Sandy Springs, it seems, is best positioned to give ht coverage in Berkeley Lake. I have inconsistent results with Sandy Springs. My yardstick is the parrot function and I don't always get a response.

Jasper seems to be the strongest repeater at my location. Again, I have inconsistent results.

I live in Duluth, not too far from W2FAL. With a mobile as base and antenna at 25 feet I can hit Sandy Springs, Jasper, and Snellville no problem, not Canton. With the Tytera 380 I bought from Ken at the Chattanooggaa hhaammfesett (sorry,

old keybboard’s doubble key sometimes gets stuck) I can get to Sandy Springs and Jasper (Jasper only from my backyard with north and west open sky.

I did replace the little R/D heat sink antenna on the 380 with a good fairly long 2m/440 HT antenna – that seems to have made a difference as far as receive goes.

Also set the lower squelch down to 1 as well… don’t know if that really helps, I did that at the same time I changed the antenna, that makes it hard to say exactly what did what, and I've just been too lazy to try variations.

Can’t hurt to have squelch set too low can it? On digital an open squelch is still dead silent nothing?

628. Atlanta Repeater

Yahoo group: Georgia_DMR
Date: 2015-12-11 15:17:17 UTC
From: Don Woodward
Topic: 610 Message: 628

I finally got around to programming the Atlanta repeater into my CS800 used as a base station with a Larsen Mobile antenna on a cookie sheet - I am at 1400' ASL and 35 miles north of downtown and I can see downtown Atlanta in the winter from my front door - I am receiving the Atlanta repeater, but it sounds like sometimes there is network latency and the voices flutter - are there any network issues or am I getting multipath? Sandy Springs comes in great even on a handheld.

From: w2xab@...
Topic: 610 Message: 629

It is really impossible to tell what the issue is, it could be multipath but multipath would not affect delay.

The cBridges that interconnect all the repeaters have what is technically known as serialization delay (only one packets can be transmitted at a time). Must remote traffic involves at least three cBridges and adding to that is the newtwork delay between cBridges, and between cBridges and repeaters. There are also de-jitter buffers that add additional delay as is typical in any VoIP application.

The audio quality issues typically are between repeater and user over the RF link. If you are hearing an issue on only one side of a conversation, it is a good bet the problem is on the senders side of the network, typically packet loss between their radio and the repeater. If you look at the cBridge NetWatch pages you can see the signal strength and packet loss. the link for the ATL repeater is http://cbridge.k4usd.org:42420 http://cbridge.k4usd.org:42420, the Sandy Springs cBridge is http://99.90.37.177:42420 http://99.90.37.177:42420/

The issue seems to be between my location and the Atlanta repeater - everyone there sounds distorted - I have checked and the frequency is entered correctly on my radio - I will move my radio to an outside roof mounted antenna and see if that makes a difference.

From: jcherepy@...
Topic: 639 Message: 639

As a Newbie, I've been looking at the Control Center K4USD Network Question Website and I was wondering about how the Bridge Groups are displayed. It appears that the same Group will be displayed with slightly different names depending on the Network. For example, DMR-MARC displays North America as "North America CC" and K4USD as NAC "02-03." Is there a cross reference, or does one just have to figure it out for oneself? And what does the :02-03" mean?

Thanks,

Bill WB4WTN

The "CC" is a Cross Connect between cBridges.

On my bridge "NAC" stand for North American Calling, the 02-03 indicates the traffic is coming in Manager 2, Port 3 (which is connected to a specific repeater.

I can't hit the downtown ATL machine from here. I setup four channels on the 444.4375 machine and I can't hit it from the house with my handheld. I tried it on an outside antenna and no joy. I can hear the repeater on my outside antenna on the analog radio, but it is pretty noisy.

Jasper is 3-4 bars on the S meter on the handheld here.

I see one listed for Canton. I tried getting into that one several months ago and could not bring it up. What's the status of that one?

Using the same antenna configurations etc, can you hit any of the downtown Atlanta UHF analog repeaters? Same question for VHF repeaters.

145.37 (CTCSS 103.5) is collocated with the Jasper DMR repeater. As a benchmark, can you access this VHF analog FM repeater?

Frank,

Can hit SNDY with rubber duck and marginally ATL with rubber duck. Can hit ATL well with 15" whip. Can hit both plus Snellville with 100" attic antenna. Cannot hit any of the others even with attic antenna.

The repeaters have nothing to do with radio ID, they are basically dump to IDs and TGs.

If the radio is showing "1234" on a receive ID, it is because the transmitting radio is transmitting that ID.

From: otterson_nospam@...
Topic: 655 Message: 655
Attachments: 1 described; binary payloads are missing from this source WARC

Hi,

I was going to upload a code plug for CS-750, but I have no upload access... so... n1kdo-GA.rdb is attached to this message. You will need to set your radio ID in CPS prior to programming your radio.

Every ID for North American users is loaded into this file, as well as any DMR repeater near Atlanta that I am aware of. I probably missed some. Also, about 15 analog repeaters as well.

The buttons on the side of the radio are programmed for zone up and zone down. Whereever possible, the talk-groups across DMR repeaters are on the same channel dial slot, so you can push zone up/down to switch repeaters and stay on the same talk groups. Top button press is for monitor mode. Top button hold is for analog talkaround. Top side button hold is power hi/lo, and bottom side button hold is scan on/off.

I'd appreciate feedback from any of the more experienced DMR users on other things I could do with the CPS, scan lists, etc., that might make this code plug more useful...

From: ke4qdc@...
Topic: 656 Message: 656

I am investigating returning to DMR with the cheap as dirt radios out now. I noticed that even though some expansion as taken place in Georgia and the Atlanta metro the file spreadsheet is extremely out dated. Would it possible for someone with extensive knowledge of the Georgia network to bring it up to date? That would help decide if it would be worthwhile for me to reinvest in another DMR radio.

Thanks

Ferrell:
I’m not sure which spreadsheet you are referring to, but the www.k4usd.org<http://www.k4usd.org> website has a lot more info. Not everything is there on all repeaters since some are connected to other C-bridges, but John has put together some good info. The www.dmr-marc.net<http://www.dmr-marc.net> website does show the location and information on all of the active Georgia repeaters.

The "GA-DMR" repeaters listed on the DMR-MARC pin map are outdated as far as the listed talkgroups. I tried to update them twice but they never updated them. It is best to look in the files section of this group, for correct "talkgroup" info. The repeater list in the file section here is outdated as well.

681. Atlanta Radio Club Georgia QSO Party - outing information.

Yahoo group: Georgia_DMR
Date: 2016-04-07 17:33:00 UTC
From: kb4kft-ga@...
Topic: 681 Message: 681

Cross posted on several Atlanta-local Yahoo groups.

Though not a pure DMR event there will be at least two DMR stations up at the park Saturday and several local hams have said they would like to come by and check it out.

From this park, between Norcross and Tucker just off Jimmy Carter, we should be able to get into Snellvile, Jasper, maybe Atlanta, I will have at least a CS 800 up and running and will have at least one HT there too, MD-380. We will be monitoring GA State and Local 2 talk groups.

Georgia QSO Party organizers do recognize UHF so any DMR contacts made will end up in the log(s) and submitted for the party.

So if you are a DMR person (or interested in DMR), feel free to come over and hang out for a while. And if you are experienced - feel free to come and help out.

And if you hear us on the air feel free to answer. The callsigns in use will be mine, KB4KFT, and the club's W4DOC.

****

The Atlanta Radio Club has hosted public GQP(Georgia QSO Party) park outings for the past several years. At one time we were the only club in the state, at least the only one known of GQP organizers) to have a public outing.

This year we are certainly going to have a park outing on Saturday April 9th starting around noon till 11pm -or- when every one decides it is time to go home. The Saturday event will be in Lucky Shoals Park, just off Jimmy Carter Blvd between Norcross and Tucker.

The exact GPS-able address is
4651 Britt Road,
Norcross, GA 30093

The goal is not to "win" the contest but to set up portable radios and antennas and have fun. In the past we have managed to get as many as ten radios up and running - with that many there needs to be cooperation to avoid band interference, but we have done it.

If you are new ham or want to learn more about portable operation come on by. If you want to bring your radio, antenna, gear, etc. to try it out come on by, we'll get you on the air. If you just want to come by and hang out, OK, come on by and hang out. There

is no AC, only battery, but we'll have plenty of battery capacity.

There is usually a pizza run about 5pm, order taking starts around then and custom pizzas are no problem. Soft drinks, bottled water, and snacks are just part of the deal (in fact, I unload that stuff first).

For more information contact me, KB4KFT at
KB4KFT @ ARRL.NET
or
VicePresident @ AtlantaRadioClub.org.

Last year I was not able to participate in the GQP, other more important things got in the way. (There are some things more important than GQP and ham radio... but not many.) This year I intend to go back to the same place I was in 2014, middle of nowhere in Wilkinson County and operate portable for Sunday, for the entire 10 hours of the event.

This is going to be a good year, seems like the pollen will be done (it is starting now) and we know the weather will be good - it always seems to be warm ad dry on GQP Saturday and Sunday.

For those of you outside the Atlanta area who don't know about Georgia pollen: last week in Florida they were reporting pollen levels as "extremely high! 75! Wow!". In Georgia levels of 3000 are pretty common for a few weeks, peak levels of 5000 and 6000 have been reported. So "yes" pollen is a consideration for any outdoor event this time of year.

According to the rules, the *only* VHF band authorized for contacts is 6M.
I can't find anything in the rules that permits 2m or 70cm contacts,
whether DMR or any other mode. I'm pretty sure repeater contacts don't
count, either.

Updated my CS-750 code plug.

Changes since last time:

444.625 on Sawnee added, analog, TS1, TS2.
Fixed missing contact number for comm1

Jeff

687. ATL-Metro Talk Group

Yahoo group: Georgia_DMR
Date: 2016-04-27 20:06:50 UTC
From: w2xab@...
Topic: 687 Message: 687

All the Atlanta Metro DMR repeaters connected to the K4USD Network now have an ATL-METRO talk group (TS1/TG8).

Metro Atlanta DMR repeaters not directly connected to the K4USD Network should contact their bridge provider if they want to join in the ATL-METRO talk group.

John, W2XAB

Hi John,

Why 8 and not 9? Just curious.

Thanks,

Jeff n1kdo

Topic: 687 Message: 691

I had John create this Talkgroup. (Metro_ATL TG 8, TS1)

The purpose or my idea was:
1) Have a place for users in the ATL and N GA a place to go that is for ATL and N GA only.
No repeaters outside of N GA will get this talkgroup. It is North GA only. We all live here and have things in common, eg: dealing with ATL traffic, so a place for all of us in ATL and N GA to congregate.
2) Use TS1 since there are dozens and dozens of talkgroups on TS2 and TS1 is the lesser
used timeslot on most repeaters.
3) Expand the use of the DMR repeaters in ATL and N GA. I have heard from several new DMR users that they throw their call out on a DMR talkgroup and no one comes back. So here we know someone throwing out their call is a fellow ATL/N GA user. Our little community meeting place restricted to just our area.
4) If someone wanted to do a NET or ARES type Net or roundtable for ATL metro have a place to go that isn't' tying up the TS2 timeslots on a bunch of repeaters. Some like nets, some don't.
5) Thought a good place for all ATL commuters to do drive time round tables and know where to go to talk to fellow N GA users.

That was my original thought on this. It is available on all K4USD cBridge connected repeaters in N GA and any other cbridge is welcome to connect to this group as long as they restrict it to N GA repeaters only and carry it on talkgroup 8 on TS1 so it is the same across all repeaters connected to the talkgroup. (Purpose of talkgroup)

To further clarify, how does ATL-Metro differ from “Local Network” or “Local2” (e.g. TS2/TG2) for repeaters considered to be part of the Atlanta Metro area?

Thanks,

Barry Baines, WD4ASW

Of those that are supposedly working on Multi Mode transceivers that include DStar but are not from Icom I'd bet on this one coming in First even if it doesn't initially have all the modes. And if it has some bugs that have to be ironed out then that's ok too. Bleeding edge stuff isn't for the appliance operator.

This looks pretty interesting, however I'm not a big fan of the LTE feature. I'd prefer WiFi, and tether to my phone if I need an update. I distrust and dislike cloud based anything.
Also, by having thus thing automatically uldate, one loses control of the configuration of the radio.
I like the fact it can do dual band digital co.munication simultaneously. Since it has three bands, it should have one more ambe chip and be able to cover those three bands simultaneously.
This sounds a lot like What Co next Systems has been suggesting as a future product for the last year or so, with many detractors.
All this ad copy sounds wonderful, but we all know the devil is in the details.
Thank you for bringing this to our attention. If you go to Dayton, see if they will communicate through this to your digital radio, and we'd all love to hear your impressions.

Shane:

If they are using the AMBE 3003 chip in it...it could do 3 streams simultaneously.
http://www.dvsinc.com/products/a3003.htm

The 3003 Chip also supports all the codecs. Biggest thing.. I think.. is the modem.
D-Star is GMSK. Others (P25/DMR/Fusion) are actually easier than adding the D-Star for multi-mode
because of the GMSK.

See http://atlantahamfest.com/wordpress/ for more info.

John Burningham, W2XAB, and I will be exhibiting, please stop by and say hello.

Just this past month, there have been 3 additional high sites added to the ATL METRO area with a 4th on its way this month.

I am working on an updated repeater listing for the hamfest.

Thanks,

Ken

Just preordered mine!
$219 out the door.
-ScottKD4YDD

Announcing the Tytera MD-9600 DMR Digital Mobile Radio!AVAILABLE SUMMER 2016!
Tytera shook the world of digital radio in 2015 with the introduction of the MD-380, a portable handheld capable of both DMR and analog operation at an analog radio price.Digital radios were outrageously expensive, and were priced out of the hands of many.
Then the MD-380 came along. It changed everything. For the first time, DMR was truly available to the masses, so to speak. Amateur radio operators on a Baofeng budget could experiment within the digital realm without spending hundreds of dollars on digital equipment, and because the UHF version was Part 90 type accepted for commercial use, small businesses could afford to keep up with their competitors and migrate to digital without the exhorbitant cost. The MD-380 was a game changer, and turned Tytera into a respected brand in the DMR marketplace almost overnight.Now they are about to do it again. Get ready for the Tytera TYT MD-9600 Digital Mobile Radio!Yes, that's right, the long-awaited announcement is here. Tytera has introduced a new mobile two way radio capable of operation in both digital and analog modes.According to Tytera, the MD-9600 operates on 400-480MHz frequencies at up to 45 watts (UHF model) or 136-174MHz VHF at up to 50 watts (VHF model). As a DMR radio, It uses Time Division Multiple Access(TDMA) technology and is compatible with MotoTRBO Tier I and II.The TYT MD 9600 boasts 1000 channels and 250 zones with 16 channels for each zone. Features include Private Call, Group Call, All Call, a lone worker mode, ANI function, encryption, short text messages, CTCSS/DCS encode and decode, power save mode, low power alarm, an emergency alarm and VOX capability. The console features a color LCD display and four programmable function keys. The hand mic also has four programmable keys, in addition to the two built-in LEDs and full DTMF keypad.The MD-9600 is also quite versatile. it's not only PC programmable, it's firmware upgradeable as well, a flexibility most other portable and mobile transceivers lack.The expected release date is sometime in 2016. No price point has yet been set or announced, but as soon as we have pricing, the MD-9600 will be available for pre-order at Buy Two Way Radios. For more specs, download the Tytera MD-9600 product sheet.

Bill,

The repeater that you may be using has a different bridge associated with it and thus different talkgroup and timeslot configurations.

ATL-METRO is on the K4USD network. It was discussed in more detail in a thread here in this group in April/May.

Is this group only for discussion of the "GeorgiaDMR" network or for DMR radio in the state of Georgia? I'm new here so I don't really know. From looking at the history of all the messages I thought it was more for general discussion of DMR in GA.

From what I read at the time in April it sounded like it was put in TS1 because there was more use of TS2. However from a few weeks of monitoring (of repeaters on the K4USD network) I seem to hear more on the NA group on TS1. I'm sure the repeaters keep some stats on that though. Could just be my perception.

Bill:

Each repeater owner has a choice in DMR.

Cbridge's:
There are two cbridge's in Georgia the K4USD (www.k4usd.org) and GA DMR (www.georgiadmr.com) cbridge's respectively. Each one carries and has different philosophies on what talk groups each carry across the US and also local. Each repeater owner can choose a cbridge partner to connect over the internet to access the ham DMR networks. There is no right or wrong partner. Each repeater owner can find a cbridge partner that serves their and the local user's needs. Be aware that each license (repeater) costs these cbridge owners $75 each plus hardware and ongoing data center costs. A cbridge connection isn't free although these partners provide us a valuable service.

Talkgroups:
Most traffic, at least on my repeater (W8RED) is local or regional accept for a few national nets such as the TAC 310 net. So if you look at Stats most traffic is on Local 2 (Network), Local 9 (local Repeater Only) on TS2 with Tac310 taking a distant 3rd on that timeslot. Plus K4USD carries 30+ talkgroups on Timeslot 2 to choose from. I think the GA DMR guys carry a half dozen or so.
On TS1 it was barely used on my repeater and I wanted a local (ATL Metro and N GA only) talkgroup to use that timeslot since we have two time slots per repeater. The ATL Metro talkgroup, TS1 TG8 has taken off and now seems to be the hangout in ATL. A bunch of repeater owners in ATL picked this talkgroup up. The good news, we all know it is fellow North GA folks on this timeslot since it is not available outside of our area. See my post on the ATL talkgroup from a few months ago on why I had John start this talkgroup on TS1. Let me know and I can forward it to you if you can't find it.

Repeaters:
Sandy Springs and Jasper are on the GA DMR cbridge and a few other more low profile repeaters as well.
W8RED, N4TAW, W4TL and K1DMR are are the K4USD network, a few other low profiles, plus the upcoming Waku Mtn repeater north of Gainesville (installed but internet not up yet). There is also a new repeater going up on Sweat Mtn (Marietta) this summer that will be on K4USD.
Sweat- Equipment purchased but not installed as of yet.

Each of these repeaters represent a $6000+ investment for the owners plus ongoing internet.
(Comcast business at Snellville costs me $87.53 a month as you can't have residential internet at a commercial repeater site) If you are

wondering the equipment involved ...do a QRZ lookup on W8RED/R and I
have the general specs.

So to answer your question, it is up to the repeater owners and
cbridge partners on what and how they carry various talkgroups.

Jasper and Sandy springs all share the same TGs.
The reason GeorgiaDMR no longer shares the Georgia state wide is due to the K4USD's network allowing the state talk group out of the state of Georgia for calling. The GeorgiaDMR network used TG 3113 as the main meet and talk group. We experimented in the early days with the use of state TG's for routed calling but found the use to be clunky. At one time we had the 3113 talk group available on asterisk. As DMR numbers grew and our understanding of how the IPSC network worked. We found that TG's we more like Ethernet v-lans in there purpose and not topic based entities.
With only 2 time slots the more talk groups you have the more TG contention you can have. And yes to a point you can mitigate this with c-bridge configurations. But that only goes so far. This is the reason we run as we do. 8 LAND Kevin (new nickname) may have more to add but that is the short of it.

I hope this clears things up for you Pete.

Talkgroups:
Most traffic, at least on my repeater (W8RED) is local or regional accept for a few national nets such as the TAC 310 net. So if you look at Stats most traffic is on Local 2 (Network), Local 9 (local Repeater Only) on TS2 with Tac310 taking a distant 3rd on that timeslot. Plus K4USD carries 30+ talkgroups on Timeslot 2 to choose from. I think the GA DMR guys carry a half dozen or so.
On TS1 it was barely used on my repeater and I wanted a local (ATL Metro and N GA only) talkgroup to use that timeslot since we have two time slots per repeater. The ATL Metro talkgroup, TS1 TG8 has taken off and now seems to be the hangout in ATL. A bunch of repeater owners in ATL picked this talkgroup up. The good news, we all know it is fellow North GA folks on this timeslot since it is not available outside of our area. See my post on the ATL talkgroup from a few months ago on why I had John start this talkgroup on TS1. Let me know and I can forward it to you if you can't find it.

Repeaters:
Sandy Springs and Jasper are on the GA DMR cbridge and a few other more low profile repeaters as well.
W8RED, N4TAW, W4TL and K1DMR are are the K4USD network, a few other low profiles, plus the upcoming Waku Mtn repeater north of Gainesville

(installed but internet not up yet). There is also a new repeater going up on Sweat Mtn (Marietta) this summer that will be on K4USD. Sweat- Equipment purchased but not installed as of yet.

Each of these repeaters represent a $6000+ investment for the owners plus ongoing internet.
(Comcast business at Snellville costs me $87.53 a month as you can't have residential internet at a commercial repeater site) If you are wondering the equipment involved ...do a QRZ lookup on W8RED/R and I have the general specs.

So to answer your question, it is up to the repeater owners and cbridge partners on what and how they carry various talkgroups.

From: Kevin Swanson
Topic: 714 Message: 716

As Kevin stated, the configurations are (and can be) setup to manage traffic in a multitude of ways and for several reasons. Each bridge and repeater owner will have specific goals and objectives that they wish to achieve with their implementation.

DMR radio configurations are already complex enough as many have experienced just setting up their radios. Add the complexity of introducing multiple entry points of traffic from multiple bridges and eventually you can lose the ability to ensure that the system works the way that it is intended. Radios are programmed to one infrastructure configuration, that changes and people start hearing traffic from people that they didn't intend to, have to ask around, figure it out, reprogram their radio to receive what they want...

Kevin and I, as very well stated, are in this for the enjoyment and hobby as most others are as well. Our philosophy is rooted in our backgrounds. We don't usually make many changes to a system once it is up and operational. We made the decision to keep the Georgia state TG only available within Georgia and not out of state. Hence the configuration as it is today with the repeaters connected to the Georgia DMR c-bridge.

I would be more than happy to have a discussion off list with anyone that wishes to discuss further.

Ok... thanks Kevin.. and Kevin.. :)
Can you elaborate what repeaters are actually up and operational on the GA DMR bridge? I have been asked numerous times about a repeater in Dallas GA. I have never been able to bring it up. Just curious what else is on the bridge.. besides Jasper and Sandy Springs...
Thanks. 73, Pete K4QHR

Subject: Re: [Georgia_DMR] ATL-METRO Talkgroup Bill:

Each repeater owner has a choice in DMR.

Cbridge's:
There are two cbridge's in Georgia the K4USD (www.k4usd.org) and GA DMR (www.georgiadmr.com) cbridge's respectively. Each one carries and has different philosophies on what talk groups each carry across the US and also local. Each repeater owner can choose a cbridge partner to connect over the internet to access the ham DMR networks. There is no right or wrong partner. Each repeater owner can find a cbridge partner that serves their and the local user's needs. Be aware that each license (repeater) costs these cbridge owners $75 each plus hardware and ongoing data center costs. A cbridge connection isn't free although these partners provide us a valuable service.

Talkgroups:
Most traffic, at least on my repeater (W8RED) is local or regional accept for a few national nets such as the TAC 310 net. So if you look at Stats most traffic is on Local 2 (Network), Local 9 (local Repeater Only) on TS2 with Tac310 taking a distant 3rd on that timeslot. Plus K4USD carries 30+ talkgroups on Timeslot 2 to choose from. I think the GA DMR guys carry a half dozen or so.

I recognize that there are concerns about about "TG Contention" when 1) one increases the number of available TGs on a given repeater, or 2) the number of users that can access a given TG increases. That increase could be due to growth within state or by allowing access to a given TG within Georgia by those outside of Georgia.

My anecdotal experience with DMR networks running up and down the East Coast from New England to Southeast Georgia/North Florida 12+ times per year is that while DMR usage (both repeater coverage and the number of users) has grown tremendously, that growth has yet to create significant contention issues on any of the DMR networks that I usually access, including K4USD, NEDECN, CT ARES, Tri-State, Bronx-Trbo, NCPRN, DMRVA, DMR-MARC, etc. I can drive for hours through well covered DMR areas and not hear anyone. Part of that may be due to time-of-day/day-of-week or it could be due in part to the 'novelty' of DMR wearing off on those that have been users for a period of time. This has also been the case with my occasional opportunities passing thorough the Atlanta Metro area where I heard no one on any of the repeaters that I accessed, including Sandy Springs; including the last time I passed through in October 2015 on my way from Folkston, GA to Dayton, OH for the 2015 AMSAT Space Symposium.

In the case of GA Statewide being accessible through the K4USD network, it appears on the surface that given the relative lack of 'continuous usage', there shouldn't be any problems allowing out-of-state access to GA Statewide for those attempting to 'call home' from outside the area. Indeed, if someone on a K4USD networked repeater in Ohio wanted to contact someone in Atlanta, it would certainly take up less network resources and be more 'network friendly' to make that contact on GA Statewide rather than making the contact on North America. The former ties up a handful of repeaters; using NA ties up hundreds of repeaters. Presumably once a contact is established, the conversation can be redirected to a tactical group to minimize impacts on other repeaters.

From personal experience accessing the First Coast DMR TG on the K4USD network from outside Georgia, I have found that ability to be a significant benefit in maintaining brief contacts with good friends on the First Coast as I traveled along the East Coast and Ohio. My use of the FCDMR talk group didn't adversely impact FCDMR since the activity level of both the repeaters I was accessing directly and the FCDMR repeaters have significant 'quiet time' where I'm not depriving 'locals' of the use of their repeaters. K4USD has GA Statewide and FCDMR as "PTT" or "User Accessible" talk groups, so a user outside of Georgia has to make a conscious effort to bring up the talk group for a specific period of time, thus minimizing impact on the host repeater.

Lastly, Georgia is indeed a large state; eliminating Georgia SW from the Georgia DMR network bifurcates the state into two camps—Georgia DMR and K4USD. If a user on a K4USD repeater wishes to contact someone on a Georgia DMR repeater, they're now apparently forced to make that contact on the Southeast talk group. This of course, then ties up every repeater in the Southeast from Virginia to Florida + Alabama and Mississippi that offers the Southeast Talk Group. Those outside of Georgia will be scratching their heads wondering why Georgia hams are using a regional talk group to make an intrastate contact and that in turn will cause some 'annoyance' from those outside of Georgia which will in turn raise 'the politics' of how Georgia is perceived by other DMR users in terms of how Georgia manages their DMR network infrastructure overall.

I hope that the DMR repeater leadership in the Atlanta Metro area and Georgia in general will find ways to enhance the user experience by carefully evaluating what is indeed feasible from both a repeater usage perspective as well as the value of the services that are provided. I would think that finding ways of collaborating on a statewide basis, irregardless of differences in network philosophies, will be create significant benefits to all, including times of emergency.

FWIW,

Barry A. Baines, WD4ASW
Westborough, MA
Folkston, GA

Attachments: 1 described; binary payloads are missing from this source WARC

We have never had a Dallas repeater. I apologies for miss-information in that regards, it seams we had folks submitting bad info to the DMR-Mark site.

The KC6OVD repeater Has always been near Kingston of the 75. KJ4KKB had a machine in east Paulding Near Acworth. When his was down we moved the ovd box there.

During this time I watched the info on the dmr marc site show the ovd box in downtown , saw it in Dallas. I used to send them corrections as soon as I noticed it. I gave up after the info for our sites and talk groups were messed up time after time.

We plan on getting kj4kkbs box back up. As for a box in Dallas, I am happy to put one out there. Do you have a location? Big tower at your house that will cover?

Send me a private mail and we can talk about it.

Ok... thanks Kevin.. and Kevin.. :)

Can you elaborate what repeaters are actually up and operational on the GA DMR bridge? I have been asked numerous times about a repeater in Dallas GA. I have never been able to bring it up. Just curious what else is on the bridge.. besides Jasper and Sandy Springs...

Thanks.

Subject: Re: [Georgia_DMR]

As Kevin stated, the configurations are (and can be) setup to manage traffic in a multitude of ways and for several reasons. Each bridge and repeater owner will have specific goals and objectives that they wish to achieve with their implementation.

DMR radio configurations are already complex enough as many have experienced just setting up their radios. Add the complexity of introducing multiple entry points of traffic from multiple bridges and eventually you can lose the ability to ensure that the system works the way that it is intended. Radios are programmed to one infrastructure configuration, that changes and people start hearing traffic from people that they didn't intend to, have to ask around, figure it out, reprogram their radio to receive what they want...

Kevin and I, as very well stated, are in this for the enjoyment and hobby as most others are as well. Our philosophy is rooted in our backgrounds. We don't usually make many changes to a system once it is up and operational. We made the decision to keep the Georgia state TG only available within Georgia and not out of state. Hence the configuration as it is today with the repeaters connected to the Georgia DMR c-bridge.

I would be more than happy to have a discussion off list with anyone that wishes to discuss further.

8 land Kevin - N8WHG

On Mon, Jun 20, 2016 at 10:52 AM, Kevin kc6ovd@... [Georgia_DMR] <Georgia_DMR@yahoogroups.com> wrote:

Jasper and Sandy springs all share the same TGs.
The reason GeorgiaDMR no longer shares the Georgia state wide is due to the K4USD’s network allowing the state talk group out of the state of Georgia for calling. The GeorgiaDMR network used TG 3113 as the main meet and talk group. We experimented in the early days with the use of state TG’s for routed calling but found the use to be clunky. At one time we had the 3113 talk group available on asterisk. As DMR numbers grew and our understanding of how the IPSC network worked. We found that TG’s we more like Ethernet v-lans in there purpose and not topic based entities.
With only 2 time slots the more talk groups you have the more TG contention you can have. And yes to a point you can mitigate this with c-bridge configurations. But that only goes so far. This is the reason we run as we do. 8 LAND Kevin (new nickname) may have more to add but that is the short of it.

I hope this clears things up for you Pete.

Subject: RE: [Georgia_DMR]

I am kinda curious... Kevin & Kevin... why GA Statewide on the GA DMR bridge isn't linked with the K4USD C-Bridge? Seems kinda odd to me, to have a GA Statewide on Sandy Springs, or Jasper, that doesn't work with GA Statewide with the rest of the GA DMR repeaters. Is TG 2 tied together on Jasper & Sandy Springs?

To answer the focused of this group issue:

The Georgia_DMR Yahoo group is hosted by Me. At the time, GeorgiaDMR network was the only Georgia amateur DMR network.
Going forward I would ask that we keep the discussions on that general topic. " The support and use of DMR in Georgia"
Topics of c-bridge operational issues or Costs should be left out. Kevin and I are in this for the hobby and enjoyment.

To: Georgia_DMR@yahoogroups.com
Subject: Re: [Georgia_DMR] ATL-METRO Talkgroup

Bill:

Each repeater owner has a choice in DMR.

Cbridge's:
There are two cbridge's in Georgia the K4USD (www.k4usd.org) and GA DMR (www.georgiadmr.com) cbridge's respectively. Each one carries and has different philosophies on what talk groups each carry across the US and also local. Each repeater owner can choose a cbridge partner to connect over the internet to access the ham DMR networks. There is no right or wrong partner. Each repeater owner can find a cbridge partner that serves their and the local user's needs. Be aware that each license (repeater) costs these cbridge owners $75 each plus hardware and ongoing data center costs. A cbridge connection isn't free although these partners provide us a valuable service.

Talkgroups:
Most traffic, at least on my repeater (W8RED) is local or regional accept for a few national nets such as the TAC 310 net. So if you look at Stats most traffic is on Local 2 (Network), Local 9 (local Repeater Only) on TS2 with Tac310 taking a distant 3rd on that timeslot. Plus K4USD carries 30+ talkgroups on Timeslot 2 to choose from. I think the GA DMR guys carry a half dozen or so.
On TS1 it was barely used on my repeater and I wanted a local (ATL Metro and N GA only) talkgroup to use that timeslot since we have two time slots per repeater. The ATL Metro talkgroup, TS1 TG8 has taken off and now seems to be the hangout in ATL. A bunch of repeater owners in ATL picked this talkgroup up. The good news, we all know it is

fellow North GA folks on this timeslot since it is not available outside of our area. See my post on the ATL talkgroup from a few months ago on why I had John start this talkgroup on TS1. Let me know and I can forward it to you if you can't find it.

Repeaters:
Sandy Springs and Jasper are on the GA DMR cbridge and a few other more low profile repeaters as well.
W8RED, N4TAW, W4TL and K1DMR are are the K4USD network, a few other low profiles, plus the upcoming Waku Mtn repeater north of Gainesville (installed but internet not up yet). There is also a new repeater going up on Sweat Mtn (Marietta) this summer that will be on K4USD.
Sweat- Equipment purchased but not installed as of yet.

Each of these repeaters represent a $6000+ investment for the owners plus ongoing internet.
(Comcast business at Snellville costs me $87.53 a month as you can't have residential internet at a commercial repeater site) If you are wondering the equipment involved ...do a QRZ lookup on W8RED/R and I have the general specs.

So to answer your question, it is up to the repeater owners and cbridge partners on what and how they carry various talkgroups.

Scott,

For me personally, I wasn't sure if this group was just for the GA DMR network.

To avoid stepping on any toes, and since the Atlanta Metro user base was exponentially growing, I created a Yahoo Group

MetroAtlantaAmateurDMRRepeaterUsers

All DMR users are welcome regardless of c-bridge affiliation.

There is also a

MetroAtlantaAmateurDMRRepeaterOwners

I have invited both Kevins to join the group.

Thanks

Ken

721. GA DMR repeater listing

Yahoo group: Georgia_DMR
Date: 2016-06-21 11:11:23 UTC
From: Ken Bryant
Topic: 721 Message: 721

Given the limitations of the DMARC listings, I have followed up on a repeater listing for the State of Georgia started by John Burningham which is broken down by c-bridge. I now maintain and distribute that directory on a regular basis.

I have asked both Kevins for their input to update their listings.

Good afternoon all,

Can we get some signal reports?

Clermont (Wauka Mtn) GA - W4TL 444.950 +5 CC1

The repeater antenna is at 2800ft elevation in Clermont, GA, which is 10 miles North of Gainesville and/or 5 miles South of Cleveland, GA.

There is a clear line of sight from the tower location to the East, South and West.

The repeater is a Motorola SLR5700 with a DB408 antenna.

Thanks,

Ken

Dave:

RFind is a reputable company and given their efforts to link data (“code plug”) to radio configurations, it certainly isn’t a “toy.”

What remains to be seen is how compatible it will be with existing networks, how well the Android process updates repeater information in the unit, and the price to “play” (e.g. not just the cost of the radio, but will the Android be WiFi only or have cellular data as well?).

This is an exciting time for DMR as new products hit the market (including what Wireless Holdings is working on), the cost of entry is dropping, and repeater coverage keeps expanding.

I have to respectfully disagree that RFinder is a reputable company. They gather repeater data for their paid subscription service in most cases using very unethical practices. I experienced this first hand from the owner who said “if someone won’t give us their data, we’ll just steal it”. I cannot say how any hardware they sell will work, but I won’t do business with a very unethical company.

I applaud the new manufacturers for new DMR radio.

Subject: Re: [Georgia_DMR] Re: Android DMR Radio

Dave:

RFind is a reputable company and given their efforts to link data (“code plug”) to radio configurations, it certainly isn’t a “toy.”

What remains to be seen is how compatible it will be with existing networks, how well the Android process updates repeater information in the unit, and the price to “play” (e.g. not just the cost of the radio, but will the Android be WiFi only or have cellular data as well?).

This is an exciting time for DMR as new products hit the market (including what Wireless Holdings is working on), the cost of entry is dropping, and repeater coverage keeps expanding.

73,

Barry Baines, WD4ASW
Westborough, MA
Folkston, GA

743. Walton County ARES to Use DMR during Oct 1 S.E.T

Yahoo group: Georgia_DMR
Date: 2016-09-30 14:03:03 UTC
From: Tom Power
Topic: 743 Message: 743

Guys:

I think this is a first for DMR in Georgia. If you can reach the N4TAW DMR repeater in Walton County, please consider checking in to the net below. ARES member or not.

Tom
W8RED

For Release: September 30, 2016 10am est

Walton County ARES to Test the Capability of the use of DMR digital during Oct 1 S.E.T

Walton County Georgia ARES as part of the October 1 Simulated Emergency Test (S.E.T.) will conduct a directed net on DMR to test the capabilities of DMR (Digital Mobile Radio) during this event.

The net and check-ins will begin at 11am local (eastern standard time) on the N4TAW DMR repeater in Walton County GA on Timeslot 2, Talkgroup Local 9.

This is a directed Net, so please listen to net control for net procedures.

When checking into the net please Indicate if you are using emergency or commercial power and your county.

N4TAW DMR Repeater Details:
443.73750+
Color Code 3
Timeslot 2
Talkgroup 9 (Local 9)
Emergency Power: The Repeater has both battery backup as well as the site has an automatic start standby diesel generator.

The use of the Local 9 (Local repeater only) talkgroup is to simulate the use of the loss of internet connectivity at the site during an emergency.

For those without DMR capability: Walton County ARES will start local nets at 10:30 am on the 147.270 and 442.050 analogue repeaters concurrently.

You do not have to belong to ARES to participate and all are welcome to check-in to the analogue or DMR nets.

The 2016 GOAL of the S.E.T. in Georgia:
From the State of Georgia ARES site for goal of the 2016 S.E.T

We have really been emphasizing two necessary capabilities for ARES the last several years. One is to have an emergency power capability. The second is to be able to communicate with one or more of the digital modes. While we will not exclude check-ins using commercial power, it really is important as emergency communicators to have a means of communicating if your commercial power is not available.

Walton County Amateur Radio Emergency Service (ARES)

744. DMR at the Stone Mountain Hamfest this coming weekend

Yahoo group: Georgia_DMR
Date: 2016-10-31 13:51:25 UTC
From: Tom Power
Topic: 744 Message: 744

Good morning:

Please forward this to anyone interested in DMR.

The Stone Mountain Hamfest is this coming weekend and DMR will be there.

Details of Hamfest:
Location:
Gwinnett County Fairgrounds
2405 Sugarloaf Parkway
Lawrenceville, GA 30045

Nov. 5-6, 2016
Sat: 8 a.m. - 4 p.m.
Sun: 8 a.m. - 2 p.m.

DMR Presence at the Hamfest:

DMR TABLE-Booth:
There will be a DMR booth-table there in the main exhibit hall (right side in club area) table number A11
John (W2XAB) will have the K4USD portable repeater connected to the network at the booth as usual. Any questions on the K4USD network, John will be in the booth most of the time. Several DMR repeater owners will be present at the table and feel free to stop by and say hello, get your questions answered, or other DMR chit chat. Also enter to win a DMR Shirt, Hat or pin donated by Two Way Digital Radio/North Georgia Communications.

DMR Forum:
On Saturday at 1:00PM in the Forum Room
there will be a DMR forum by a couple of us with yours truly taking the lead. For this presentation, the second half will be something new, talking about the possibilities of what can be done with DMR besides just using it as a worldwide digital repeater mode. Also I have asked all DMR repeater owners in ATL to come by the forum so you can meet the sponsors of the DMR repeaters around GA.

DMR Dealer Present in booth A9.
Next to the DMR booth, Ken from North Georgia Communications/Two Way Digital Radio will be there selling Motorola and other DMR radios. Ken is the personal sponsor of the downtown ATL repeater. He will also be selling the remaining stock of DMR shirts, hats and pins at his booth in addition to radio equipment. You can also enter at Ken's booth to enter to win a DMR Shirt, Hat or pin. By the way, rumor is Ken will also be selling/having on display some P25 APX radios if you need some new high end toys.

TALK in on DMR:
Anyone going to the hamfest we will be informally (no formal talk-in)
all listening to ATL Metro talkgroup 8 on Timeslot 1.

Hope to see everyone there,
Tom

Tom -

Where can I get a copy of your hamfest DMR presentation?

Thanks for a great presentation! I'm fairly new to DMR. Your presentation helped me understand some things that, until yesterday, were somewhat muddy in my mind.

73 - David, AG4F

747. K1DMR OFF AIR

Yahoo group: Georgia_DMR
Date: 2016-11-30 04:28:17 UTC
From: email@...
Topic: 747 Message: 747

K1DMR in downtown Atlanta has lost its privileges to the current site.

K1DMR will be off the air permanently this coming Saturday, December 3, as it is being removed from the building.

The future of K1DMR as a high site in downtown Atlanta is currently under review.

Anyone with access to another high site in the downtown Atlanta area and interested in providing a new home for K1DMR, please contact me off list.

Anyone interested in supporting a new downtown high site in general, please contact me off list.

Thanks to all those who gave financial, technical and logistical support to K1DMR while at the current site.

Ken

Have an excellent condition CSI CS-800 and CS-700 ht For Sale.

Both have latest firmware, including the CS-800.

All original accessories plus flexible duck for the CS-700.

325$ for both, package only, price firm, pick up in Dallas, Georgia.

Tired of all the changes to the repeaters, rigs work 100%.

I see a VHF DMR on 145.370 N8HWG in Jasper.
Is this on the air? How about the UHF?

Is there an updated list for the GA-DMR repeaters anywhere?

I am heading up to the Cabin in Ellijay... want to make sure my radios are updated before I head out in 2 weeks!

UHF is working on local but made a call on Worldwide 3 and could not hear myself and no answer from anyone out there. No answer on US but did hear myself.

VHF was analog - been around for a long time - I had not heard anything about it going DMR but that would be cool - I have a CS800D dual band DMR mobile.

Don, they are not on the national network. The IP service to those sites is being re-done by kevin s. He moved and could not keep his same ip provider. So he is working on new links for the traffic.

Current work demands has made it difficult to get time together when we can get the work done.

Thanks for checking Don. We have all the gear and the plan. Time is what we need.

766. A few stupid questions

Yahoo group: Georgia_DMR
Date: 2017-12-03 17:54:07 UTC
From: ratpad@...
Topic: 766 Message: 766

I have been living in the analog world for far too long. So I decided to jump into the digital age. First with D-STAR, I have a 5100A and it is a wonderful radio but D-STAR, not too impressed. So I went to Fusion it's a fine radio and again not so impressed with the digital aspect but it does work. Then DMR, first a cheap MD-380 then followed that up with an MD-390. I managed to hack a few codeplugs together and have had some success with the local DMR repeaters.

Well, finally I splurged on a CS800D, I have managed to get on the air with it but I have to report marginal success so far. Most likely error.

I used a new MOTO install kit with heavy gauge wires all the way to the batteries (I have 2 it's an F250 diesel) Connected it to a new Larsen dual bander and checked the SWR's etc... All the old analog stuff I know how to do I even included the old school flat ground straps. The batteries are HD Interstates and are only one month old. Its a 6.0 Powerstroke so battery maintenance is paramount. I am certain power to the radio is good but the wires provided by CSI are tiny IMO.

The problem is my cheap little 380 & 390 work repeaters better than the 800D. To be honest sometimes it is of no use whatsoever. I can hear a QSO and even work one on the HT and all the while the 800D makes not a sound.

So here are my stupid questions:
1) in the DMR mode should output power appear to be pulsing very rapidly? I know it is digital and my meter may not be able to deal with the RF signal it is producing but I was thinking it should be just a standard FM type signal. When placed in simplex it is a rock solid meter reading.
2) Could it be my hacked version of a codeplug? I have been able to hold a QSO with the HT while the 800D was silent. I have been able to connect to the parrot for testing but only get about 2 seconds of audio on playback.
3) Does anyone have a codeplug for the 800 in the metro Atlanta area so I can try a clean working one rather than my hack job?

Thank you,

Richard

You won’t be able to read an accurate power level for DMR without a special meter.

I have a CS800 in my Jeep Patriot with Motorola wires - works fine.

You absolutely cannot get a good reading and I can prove it :) When I saw my meter jumping all over the place my first thought was bad finals in a brand new radio. So I put it on FM Analog and saw it was rock steady so I assumed it was the DMR transmission mode but I hate to assume anything. I was sent a clean and working code plug and after I added my info I uploaded to the rig and it appears to be working much better. So I have a clean working codeplug now to try and learn from and a radio in the truck that adds another mode to play with.

Hi Richard,

A friend of mine tried a CS-800D and ultimately sent it back to CSI. His issue was that in standard FM mode, the radio would only transmit at full power for a few seconds, then drop down to a few watts. He also was disappointed that the radio did not allow for dual watch, i.e. ability to monitor two frequencies/bands simultaneously. Here are the issues he reported to CSI:

1. Analog RF output – The radio takes a 50+ Db drop in power out after TXing for around 5 seconds. SWR checks less that 1.5:1. The TX has no issues with output on digital.

2. Analog TX noise – With encode CTCSS there is excess deviation. This manifests as an annoying background noise during TX (maybe PL harmonics?). The TX is clean with no PL encode.

3. Nuisance delete – It seems activating nuisance delete will clear the delated channel's audio but the channel stays active showing RF signal until the delated channel's carrier drops. This is very annoying when the deleted channel is up for some time until there is a carrier drop. You lose control of the radio until a power cycle or carrier drop.

4. Display – There are times when I land on a channel and get all "ooooooooo" in the display.

5. The radio is very slow to allow audio pass in repeated DMR scan. I see the LED flash with the short green that seems to indicate the presence of a signal that is not decoded.

6. Programing – About 15% of the time the write only goes to 99%. I am using Windows 10. I have tried different PCs.

7. Case – The unit I received has some minor scratches on the top of the main unit. When I opened it was packed poorly and the head was not connected to the body.

CSI response:

We're sorry you are having problems with your CS800D. A couple of your issues are either known bugs or the current level of performance. The others may either be unreported bugs or a problem with your particular radio.

1. Is the power drop noted in UHF, VHF, or both bands? The radio will drop the power based on the temperature of the amps, but this typically happens after 5 or more minutes of continuous high power TX on a VHF channel, a bit longer on the UHF band. We have not seen any power drops

after 5 seconds.
2. Our testing on the service monitor indicates CTCSS deviation falls within specifications. There have been no reports of this issue from anyone else.
3. The nuisance delete function is a known bug and will be fixed in an upcoming firmware release.
4. This may be a new bug in the display, but it is the first report of such behavior.
5. The scan performance does need improvements, and will be addressed in future firmware releases.
6. There have been no prior reports of CPS communication failures on Windows 10 or 7. Please doublecheck that your antivirus and anti-malware programs allow the radio to connect and communicate as an external drive.
7. Every mobile radio we sell has these scuff marks due to the packaging. Reports of this to the manufacturer have not produced any changes yet. We occasionally see a disconnected front panel when the folks assembling and packing the radios make a mistake and do not connect it securely. This has not caused any permanent problems to date.

As for proceeding, you can return the radio to us and we'll test the power output and CTCSS issues on the service monitor, then repair or replace it if we find any issues; or you can return the radio for a full refund if it does not meet your expectations and needs.

Don is correct regarding RF power measurement of a DMR transmission. TDMA switches between TX and RX hundreds of times per second, which results in a much lower duty cycle than analog FM. This extends battery life, but the waveform presents a problem for some RF measuring devices.

Regarding the poor sensitivity, is it deaf in DMR and FM, or just DMR? Is it possible you have the squelch setting too tight in the code plug?

Regards,

Reed / WW3A

Topic: 766 Message: 770

Wow, well so far I don't have much to say about it other than I was able to get it on the air after being sent a good codeplug. For the life of me I can't see a huge difference in settings so it must be something to do with zones or rec groups or who knows what. As for FM I don't plan to use it for regular FM work as I have a couple dual banders and mostly hang out of 2 meter FM. Here lately it has been so quiet I have not been able to really test it out. I am certainly not a power user or much of a rag chewer so I may just hook it to a dummy load and see how it goes on FM. I have read of issues with these radios on FM having issues dropping power when on high but I think that was found to be a weak battery for the gent.

I certainly appreciate the info and will be on the lookout for any such issues. I did notice a new firmware update so I will do that at some point this week. I don't think the squelch was too high and what was odd was I would go to the parrot channel and do a test and it sounded horrible and broken up. I listened on my 380 and it was the same. When I would do a test with the 380 the audio was fine no issues and yet the 800D would usually remain silent. It was as if sometime the 800d didn't really know what to do. User error I am sure as now it is working well as best I can tell. Again it has been fairly quiet around here. Well I say that with the hope that it has and not the radio just being quiet.

One thing I can report is that if you change channels to quickly it will lock up I found that last night.

Thanks again for the input

Richard

Could y'all please publish what talkgroups are statically linked and which are PTT controlled?

Also could you let us know what is contactable from over on the Brandmeister and DMARC networks?

When traveling in the area it would be nice to know what connectivity there is and I've yet to be able to hear anyone.

Sandy Springs is the only one I can hit from my office and it is always deathly quiet.

Thanks

Ralph

Don, they are not on the national network. The IP service to those sites is being re-done by kevin s. He moved and could not keep his same ip provider. So he is working on new links for the traffic.

Current work demands has made it difficult to get time together when we can get the work done.

Thanks for checking Don. We have all the gear and the plan. Time is what we need.

Steve-

I guess this was a response to my message?

I know the Brandmeister info.

I am asking specifically about the 4 GA-DMR machines and what they can reach as well as the current status. Jasper, Sandy Springs, Canton and Dallas are what I *think* are the GA-DMR machines

Or is this implying that those 4 are switching over to Brandmeister.

Jasper and Sandy Springs are in the Georgia DMR cBridge. The talkgroups are accurate on the DMR MARC website.

775. RE: [Georgia_DMR] Regarding the 4 Georgia_DMR repeaters (I think there are 4)

Yahoo group: Georgia_DMR
Date: 2018-01-14 23:10:47 UTC
From: ralph
Topic: 771 Message: 775

1. Are all 4 machines on the Georgia DMR cBridge? Is this cBridge interconnected to any other cBridges?

2. What talk groups (if any) are linkable to Brandmeister? I expect that would be something preprogrammed in the cBridge.

It would be extremely useful to know how to tell someone out of range of these 2 machines how to be able to talk to me when I am on either the Sandy Springs or Jasper repeater.

Subject: Re: [Georgia_DMR] Regarding the 4 Georgia_DMR repeaters (I think there are 4)

Jasper and Sandy Springs are in the Georgia DMR cBridge. The talkgroups are accurate on the DMR MARC website.

On Sun, Jan 14, 2018 at 5:58 PM 'ralph' ralphlists@... <mailto:ralphlists@...> [Georgia_DMR] <Georgia_DMR@yahoogroups.com <mailto:Georgia_DMR@yahoogroups.com> > wrote:

Steve-

I guess this was a response to my message?

I know the Brandmeister info.

I am asking specifically about the 4 GA-DMR machines and what they can reach as well as the current status. Jasper, Sandy Springs, Canton and Dallas are what I *think* are the GA-DMR machines

Or is this implying that those 4 are switching over to Brandmeister..

Could y'all please publish what talkgroups are statically linked and which are PTT controlled?

Also could you let us know what is contactable from over on the Brandmeister and DMARC networks?

When traveling in the area it would be nice to know what connectivity there is and I've yet to be able to hear anyone.

Sandy Springs is the only one I can hit from my office and it is always deathly quiet.

Thanks

Ralph

Don, they are not on the national network. The IP service to those sites is being re-done by kevin s. He moved and could not keep his same ip provider. So he is working on new links for the traffic..

Current work demands has made it difficult to get time together when we can get the work done.

Thanks for checking Don. We have all the gear and the plan. Time is what we need.

Can’t speak to the Canton repeater. You may wish to contact the owner directly. Dallas came back online recently and I believe mirrors Sandy Springs and Jasper.

I believe that the DMR MARC worldwide, worldwide English and North America are all covered as well as “The Bridge” and “TAC310” are all interconnected with their respective interconnection network.

I don’t believe that brandmeister is connected.

Thanks.

It looks like The Bridge may be something in common., although that seems to be a very busy group.

I might try 310 to see if it crosses over.

Are you the owner of Jasper?

Can’t speak to the Canton repeater. You may wish to contact the owner directly. Dallas came back online recently and I believe mirrors Sandy Springs and Jasper. I believe that the DMR MARC worldwide, worldwide English and North America are all covered as well as “The Bridge” and “TAC310” are all interconnected with their respective interconnection network. I don’t believe that brandmeister is connected. On Sun, Jan 14, 2018 at 6:13 PM 'ralph' ralphlists@... [Georgia_DMR] <Georgia_DMR@yahoogroups.com> wrote:
1. Are all 4 machines on the Georgia DMR cBridge? Is this cBridge interconnected to any other cBridges? 2. What talk groups (if any) are linkable to Brandmeister? I expect that would be something preprogrammed in the cBridge. It would be extremely useful to know how to tell someone out of range of these 2 machines how to be able to talk to me when I am on either the Sandy Springs or Jasper repeater. There seems to be a lack of information about the Georgia DMR machines here in the ATL! Many of the web sites have outdated information. Is it possible to put something together to list all the ones under GA DMR and whether or not they are active/connected? The same needs to happen for a lot of the other K4USD connected machines. Info come out in bits and pieces and it's hard to link info to build correct code plugs. Thanks, Chuck-WA4RVO

The files on the yahoo group page have the info. The georgiaDMR has not changed much in 4 + years, other than a site having internet or not.

I will try to spend some time tonight to look and freshen the info on the group site.
The yahoo group site is the official source of our info.

Chuck,

I took a look at the MD380 codeplug you uploaded this morning, and noticed some odd things about a few of the repeaters. I didn't have a chance to double check everything, or look at the other two radio codeplugs you uploaded yet. The two new Brandmeister repeaters on Sweat and Pine Log in particular had a few issues with the TX Contacts assigned. I saw a couple channels with NA and WW mixed up, a MetroATL channel with the WW talkgroup assigned, and a couple other quirks.

I also noticed that you're not using RX groups, which has been linked to a bug in the MD380 firmware that will prevent your radio from being able to transmit during the repeater's CallHang time (configured to 2 seconds on some of the repeaters in this area) when an RX group isn't used.

Another thing I've discovered and tested recently is the "In Call Criteria" (a new option in CPS 1.34 and newer). Yours is set to "Always", which will allow somebody to accidentally transmit over someone else that is actively using the same timeslot. The only fix we've found after lots of experimentation is to set Admit Criteria to "Color Code" (as you already have) AND set In Call Criteria to the "Follow Admit Criteria" option.

Let me know if you have any questions about these issues. I'm working on trying to patch the CallHang transmit bug in the MD380Tools radio firmware, but it's not been a straightforward 'quick fix' so far.

Thanks for finding that. After building four different type of codeplugs for four different radios, I knew they couldn't be that perfect. I will go back thru and make corrections and try again. I did notice with some versions of the CPS, that if you remove a channel as I have done some times, the data doesn't shift correctly. I don't use RX groups because I did not want several channels on the time slot to come in on the channel unless I was running scan. One way o do it was to put each TG into a single RX group. I was lazy! I missed the "always" criteria by mistake as I always use "color code". Tks for the heads up. Chuck WA4RVO

Kevin,

Thank you for taking the time to make sure the spreadsheet is up-to-date. A few of us are actively trying to make sure that all the repeaters in the Metro Atlanta area have up-to-date information published online, and knowing that this info has been looked over recently is a huge help. I've also recently published a document with detailed info about the Brandmeister repeaters I maintain (Little Sweat and Pine Log), and someone else is working on compiling an up-to-date detailed listing of the high-site GeorgiaDMR, Brandmeister, and K4USD repeaters in the area.

Do you know which talkgroups are linked full-time, and which ones are PTT activated? I noticed you mentioned that WW is PTT-activated but I'm curious as to whether any others are like this too, or if they're all on full-time. It might be good to have a separate column in the spreadsheet for whether the TG is PTT-activated or enabled full-time.

Thanks,

Spencer Fowler

There has been a surge in DMR activity.

The newest DMR repeaters in GA were put up in December by Big Shanty Repeater Gropup.

There was a super wide coverage machine, a new one at Sweat Mountain plus a new Downtown one is coming online in the next 2-3 weeks. Another new one in Columbus is on the air plus a (currently local, but linked) one in Auburn AL.

On their Facebook page there are recent code plugs for most radios, but not sure about the 750. There is also a lot of current DMR info.

Search for BSRG in Facebook if you are on there. Note that there is both a Page and a Group, so you probably want to look at both.

Since the new repeaters are all on the Brandmeister network, the main Brandmeister site has great details on the W4KIP Big Shanty repeaters, plus a last heard log of who has been on the machines and when.

For the super wide coverage Pine Log Mountain machine, here is the link to see this interesting information. https://brandmeister.network/?page=repeater <https://brandmeister.network/?page=repeater&id=311343> &id=311343

This one is for Sweat Mountain: https://brandmeister.network/?page=repeater <https://brandmeister.network/?page=repeater&id=311340> &id=311340

You can substitute the DMR ID for any repeater at the end of the link. The repeater must be on the Brandmeister network.

Thank you for all the nice pointers. The one thing I could use is the slot and number for the Metro Atlanta talkgroup. And I have a lot to learn with Brandmeister, it is new to me.

Here is a plug for NW Georgia. Has Polk and Paulding SO (rx only) and the the Battery at Suntrust Park for receiving. Also has the four remaining DMR-MARC repeaters. Some analog machines as well. Also included are all current US contacts. Scan works on the RX only zones, no scan on the dmr repeaters. If anyone sees a mistake please let me know.

The 2018 AMRC FOX HUNT
The Alford Memorial Radio Club will host a Fox Hunt on Saturday, April 7, 2018.
Click here for a PDF of the Fox Hunt Information, Rules and Regulations
http://totr-radio.org/files/2018_Fox_Hunt.pdf
We are asking all teams to pre-register so we will know ahead of time who will be competing in the hunt.
Click here for the registration form! http://totr-radio.org/foxreg.html
We ask that you please make your BBQ Fox picnic reservations ahead of time so we know how much food to have on hand.
Everyone planning on attending the picnic is requested to use the link to the reservation form below.

Picnic Reservation Link: Click here for the reservation form!
